

REMARK

EQZ-Spec Cat-Back Exhaust System

Application: Honda S2000 (AP1/AP2) 2000~2009

Special Collaboration with Zero Auto Factory

Do not install if you do not have proper mechanic safety equipment and proper tools.

If you need an assistance with your installation, please contact an professional for install.

Features:

- Single-Exit exhaust system with REMARK original design Helmholtz chamber
- Full 2.5" piping
- Modular configuration with two equalizer plates for 3 different levels of sound
 - Full block off plate for maximized performance and at the loudest setting
 - Restrictor inlet plate for mid-level sporty tone, still retaining comfort
 - Run without plates to utilize the full effect of the Helmholtz chamber for the quietest setting
- T304 Stainless Steel mandrel bend piping
- REMARK proprietary designed mufflers
- Factory OEM hanger rod construction

Level 1 - (Quietest Setting)

Without any plates installed, using just the gasket for the chamber.

With the chamber fully opened to the exhaust, noise is reduced. This gives the quietest street friendly sound levels perfect for daily driving and comfort while heading to or from the track.

Level 2 - (Mid Range)

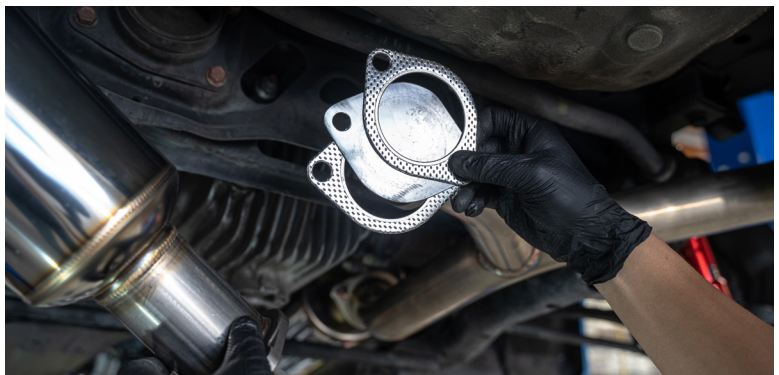

With the Restrictor inlet plate installed in between the chamber and exhaust flange. It offers a good mid range sporty tone that is not overbearing. Good for drivers that want to enjoy their car on the street with reasonable exhaust note levels.

****When using this configuration, make sure the Restrictor Inlet plate is going towards the Helmholtz chamber.****

Level 3 - (Straight Flow)

Utilizing the block off plate (optional to completely remove chamber from vehicle or keep attached to the system).

This will allow the most exhaust gases and sound to flow straight out the exit, giving the exhaust its loudest performance note for the maximum driving experience.

When using the Restrictor Inlet Plate and Block Off Plate use 2 gaskets to sandwich the plates.
