PARTS LAYOUT

INSTALLATION

- We recommend installation to be performed by a trained and/ or qualified technician.
- Remove OE exhaust system: rear mufflers and midpipe.
- Remove OEM donut style gasket from downpipe (downpipe to midpipe connection). No adapter is needed.
- Install REMARK exhaust components using the original rubber hangers unless otherwise noted.
- Install all gaskets and hardware. Leave the hardware hand tight.
- Slip on the muffler hanger brackets [D] and [E].
 - [D] - Longer Hanger Rod - installed at the rearward section of the muffler canister with the rod tip facing front of vehicle
 - [E] - Shorter Hanger Rod - installed closer to the tip of the muffler canister with the rod tip facing the same direction as the muffler tip

- Align flanges, gasket, and snug all hardware so that sections cannot move.
- Check positioning of the exhaust piping, and tips(s). Reposition if needed by loosening hardware, adjust position and retighten hardware.
- When placement is confirmed, tighten all hardware to recommend torque spec.
- Gently shake/ move the exhaust system to ensure there is proper clearance around the entire system, especially the tips to bumper.
- Thoroughly wipe down the exhaust system from any grease, dirt, handprints, fingerprints, etc... as these may cause a permanent stain once the exhaust reaches operating temp. NOTE: If optioned with the Burnt finish tips, make sure to only clean with car wash soap and water. Some cleaners may affect the Burnt finish.
- Start the engine
- Check for any leaks, fitment issues, rubbing, etc..
- Complete one heat cycle of the exhaust system and re-tighten clamp [7].
- After ~100 miles of driving, re-check for exhaust leaks, fitment issues, and re-torque all hardware.
