

Connect the GP-GPS GPS pulse sensor to GaugePilot using GP-SA01 isolating wheel sensor adaptor.
 GP-SA01 electrically isolates its input (green/black) from its output (green&blue / blue) using an opto-isolator.
 GP-SA01 can also be used for Wheel Sensor 1 (Cut off the included terminals and splice its green&blue and blue wires to your existing wheel 1 pulse and wheel 1 ground wires).

The two black wires of GP-SA01 are internally connected. The second black wire is provided for your convenience.

GP-GPS generates 8000 pulses per km.

Insert into Existing Black (A) GaugePilot connector

GP-GPS GPS Pulse Sensor with GP-SA01 isolating adaptor
