

Transfer Decal

Application Instructions

Peel off the backing layer. Do this slowly and methodically, ensuring that each of the logo parts clings to the front (sticky) section. The decal can tear during the application process if the back paper is pulled or ripped off too fast.

Discard the backing paper and firmly apply the decal to the desired surface. Make sure that the surface is clean and dry before application.

Lastly, peel off the clear adhesive front. Again, make sure this is done slowly and methodically so that each part of the logo is properly transferred to the surface.
