For obvious reasons, cleaning products are in high demand right now. Dettol is likely having the best year of its life, as is bleach. As we all do our part to try and [tackle COVID-19](https://www.russh.com/how-to-protect-yourself-from-coronavirus/) (<https://www.russh.com/how-to-protect-yourself-from-coronavirus/>), it is likely our waste output has increased. We are using single-use wipes, gloves, masks and more to protect ourselves from the virus. But what happens when you're doing your best to stay eco-friendly amid all this? At the end of the day, the only thing we know for sure that [effectively kills virus strains such as COVID-19](https://www.health.gov.au/sites/default/files/documents/2020/03/coronavirus-covid-19-environmental-cleaning-and-disinfection-principles-for-health-and-residential-care-facilities.pdf) (<https://www.health.gov.au/sites/default/files/documents/2020/03/coronavirus-covid-19-environmental-cleaning-and-disinfection-principles-for-health-and-residential-care-facilities.pdf>) is 70% or higher isopropyl, ethanol, and warm soapy water for hands, but after the strong stuff is used for the essentials, and we are keeping the house extra clean, we've rounded up our favourite eco-friendly options, below.

### [Koala Eco](https://koala.eco/collections/all-products) (<https://koala.eco/collections/all-products>)

Koala Eco has a full range of household cleaning items based on high concentrations of essential oils from [native](#) ([tag/native/](#)) Australian plants. Their antibacterial and disinfectant formulas are biodegradable, grey water and septic tank safe and are free of synthetic perfumes, chlorine, bleach, sulphates and phosphates. Their packaging is refillable too, so reducing the amount of packaging used to clean is accessible.
