Projection Porcelain whiteboards Use and Maintenance

Projection Porcelain whiteboards offer an ideal alternative to projection screens.

They are manufactured from a vitreous enamel steel surface that offers 60% less sheen than a traditional Porcelain whiteboard.

The surface contains and features a special manufacturing process incorporating a mica embossed top layer.

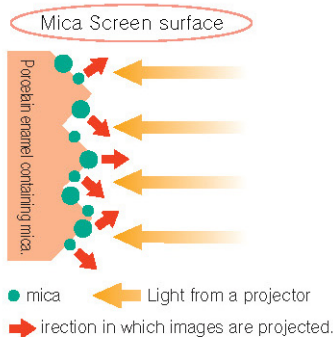

USE

We recommend our Projection Porcelain for applications where the client will potentially use the board 80% of the time for projection purposes and 20% for writing purposes. Ideally the client will project an image onto the whiteboard .. and by using a traditional dry wipe marker pen ... can annotate over the images and erase their workings after the meeting or lecture.

It's wide angle screen enables all viewers, no matter where they are seated to see clear images.

Clear reproduction of the images and high colour fidelity are ensured.

MAINTENANCE

As the surface is primarily aimed at projection usages .. the cleaning of this surface is somewhat different to a traditional Porcelain Whiteboard or even a standard magnetic whiteboard surface.

The process to erase and clean is best undertaken by wet wiping the surface. And the best cleaning solution for this is a VISIONCHART microfiber 'Magic Wipe' cloth (order code : VA0010).

By cleaning with a damp Magic Wipe the surface is guaranteed to offer a long service life of some 20 years ... and is of course, environmentally friendly as no chemicals are used in the cleaning process.
