

THE USER INSPECTION

Inspect the equipment according to your department's policy for inspecting life safety equipment. The equipment should be inspected after each use and at least once a year by an inspector that meets your department's training standard for inspection of life safety equipment. Record the date of the inspection and the results in the equipment log or on a tag that attaches to the equipment. Each user should be trained in equipment inspection and should do a cursory inspection and check component compatibility before each use.

When inspecting the equipment, check the webbing for cuts, worn or frayed areas, broken fibers, soft or hard spots, discoloration, or melted fibers. Check the stitching for pulled threads, abrasion, or breaks. If any of the above are noted, or if the equipment has been subjected to shock loads, fall loads, or abuse other than normal use, remove the equipment from service and destroy it. If there is any doubt about the serviceability of the equipment, remove the it from service and destroy it.

CARRYING, MAINTENANCE & STORAGE

During use, carrying, and storage keep the Rescue Runner away from acids, alkalis, exhaust emissions, rust and strong chemicals. Do not expose the runner to flame or high temperatures. Carry the Rescue Runner where it will be protected as the runner could melt or burn and fail if exposed to flame or high temperatures.

If the Rescue Runner becomes soiled, it can be washed in cold water with a mild detergent. CMC Rescue recommends the use of LifeLine Cleaner. Dry out of direct sunlight. Do not dry in an automatic dryer. Store in a cool, dry location.

REPAIR

All repair work shall be performed by the manufacturer. All other work or modifications performed elsewhere may void the warranty, and releases CMC Rescue, Inc. from all liability and responsibility as the manufacturer.
