### **USE**

The harness works best if positioned high on the chest. This position gives the most stability which usually means the most comfort when working. As much as possible, the straps on the back should be positioned like a V. Use all of the adjustment points to position the radio to the position that feels best.

To put the harness on, first unsnap the quick release buckles. Insert head through the straps. Reach back for the end of the horizontal straps and re-snap the buckles. To adjust the height of the radio pocket, insert the included tongue depressor (or other flat surface) alongside the bottom strap to separate the hook and loop surfaces. Adjust for the proper height with the plastic buckle just above the top edge of the pocket. Remove the tongue depressor and check to make sure the bottom strap is secure. Place the radio antenna through the shock cord to secure the radio while inverted.

### **CARRYING, MAINTENANCE & STORAGE**

During use, carrying, and storage keep the equipment away from acids, alkalis, exhaust emissions, rust and strong chemicals. Do not expose the equipment to flame or high temperatures. Carry the equipment where it will be protected as it could melt or burn and fail if exposed to flame or high temperatures.

If the equipment becomes soiled, it can be washed in cold water with a mild detergent. CMC Rescue recommends the use of LifeLine Cleaner. Dry out of direct sunlight. Do not dry in an automatic dryer. Store in a cool, dry location.

### **REPAIR**

All repair work shall be performed by the manufacturer. All other work or modifications may void the warranty and releases CMC Rescue, Inc. from all liability and responsibility as the manufacturer.
