## **WATERPROOF RADIO HARNESS**

**Made in USA**  
of US and foreign components

PRODUCT LABEL

The CMC Rescue Waterproof Radio Harness system secures an Aquapac radio bag to the CMC Rescue Radio Harness. The radio bag is intended to provide protection during swiftwater/flood rescue operations as well as from splashes, rain or back spray from a fire hose. It is not intended for dive operations. While the Aquapac bags have an excellent reputation, the following suggestions will help protect your radio equipment:

- **Make sure that the bag is properly closed and sealed before commencing operations. Follow the instructions provided by Aquapac.**
- **If possible, use older or “replaceable” radios for water operations.**
- **Use with caution and continue to evaluate the security of the seal as conditions warrant.**

The CMC Rescue Waterproof Radio Harness utilizes a harness system similar to that on our standard radio harness. The harness works best if positioned high on the chest. As much as possible, the straps on the back should be positioned like a “V”. Use all of the adjustment points to best position the radio. Make sure that the straps holding the radio bag to the chest harness are secure.

### **⚠ WARNING**

**When used during swiftwater operations, the harness system on the CMC Rescue Waterproof Radio Harness can create a snag hazard. CMC recommends that the harness be worn under the PFD or used without the harness to reduce this risk.**

**All water rescue operations should be performed by trained and experienced personnel only.**

### **MAINTENANCE**

If the equipment becomes soiled it can be washed in cold water with mild detergent. CMC recommends the use of LifeLine Cleaner. Dry out of direct sunlight. Dry the inside thoroughly with a soft towel.

### **REPAIR**

All repair work shall be performed by the manufacturer. All other work or modifications may void the warranty and releases CMC Rescue, Inc. from all liability and responsibility as the manufacturer.
