Water Park Maintenance Coatings

This series of coatings manufactured by Creative Polymers can protect fiberglass, concrete, mild steel and even soft EVA foams. Many Water Parks use the "Armor" series of products to extend the life of their park features including railings, slides, pools, metal structures and walk way areas. Creative Polymers has both flexible and elastomeric UV and color resistance Topcoat Systems for any Water Park maintenance needs. These brush, roll and sprayable systems are great to rehab existing faded water features, and other deteriorated park attractions. Materials are designed to be easy to apply by maintenance staff members or Creative Polymers can provide a list of regional qualified contractors to complete the work.

All systems are extremely chlorine resistant and last twice as long as existing epoxy and gel coat systems. Pictured in the photos are Creative Polymers systems for fiberglass slides and soft foam safety applications over EVA foam for kid protection against falls and injury. The Trade names include: Slide Armor™, Splash Armor™ for Pools and Lazy Rivers, Theme Armor™ for Metal and Fiberglass Features. Standard and custom colors are available.
