Instructions

First time use:

Before turning your scale on for the first time, remove the plastic battery tab.

How to weigh:

- 1) Press the ON/TARE button. All display segments will appear for approximately 2 seconds before resetting to zero.
- 2) Press the UNIT button to select the units (LB, OZ, G, KG)
- 3) Place item slowly on the platform.
- 4) Press the ON/TARE button to turn the scale off

How to use the "Tare" feature:

This feature allows you to obtain the exact weight of an item in a container, by subtracting the weight of the container.

- 1) Place the container, without the item, slowly on the platform.
- 2) Press the ON/TARE button. The weight of the container will be removed and the display will reset to zero.
- 3) Slowly add the item to the container. The display will show the weight of the item only.
- 4) You may continue to determine the weight of each additional item as they are added by repeating steps 2 & 3.

How to clear the "Tare" feature:

Remove all items from the platform and press the ON/TARE button.

How to ignore the container weight without using Tare

If you would like to ignore the weight of the container without using the Tare feature, place the container slowly on the scale before turning it on. You may now use your scale as usual and the container weight is ignored.

Do not place overweight items on the scale

Weighing items over the maximum weight capacity will cause an overload "EEEE" error to display. Immediately remove overweight items to avoid causing damage to your scale.
