# RINFIT

SILICONE RING
SIZING GUIDE

To Print This Page

1. When you're printing this page, start by downloading this PDF file to your computer and making sure you're printing at 100%. That way, the ring sizer will be able to make accurate measurements.

2. If you're unsure how to check the print size: open up your printer dialogue box and look for the "scaling" settings. Make sure it's set at "none" or uncheck the box for page scaling.

3. Once printed, compare a ruler or a standard United State quarter to make sure the size is correct. Taking this extra step will ensure that your measurements are accurate.

To Measure Your Finger

1. Start by cutting out the silicone ring sizer with a pair of scissors.
2. Using the point of scissors, make a slit between the black "READ SIZE HERE" arrow and the letter A.
3. Bend the ring sizer into the shape of a ring, inserting the tapered end through the slit you have just now cut.
4. Place the sizer on your finger and pull the tapered end to increase the tightness.
   Avoid tightening too much, but at the same time, ensure a comfortable fit.
5. Please bear in mind that the ring sizer is in US sizes. If you're using a different system, use the graph to find the corresponding size.
