Nail-Aid's 1 Second Spray Away Simplifies Nail Polish Removal

Nail-Aid is revolutionizing the task of at-home nail polish removal with its newest products, which take the form of a spray.

The 1 Second Spray Away is offered in both acetone and non-acetone varieties, with the latter featuring a hydrating formula that includes coconut oil and ceramide. As an alternative to nail polish remover liquids that are packaged by the bottle and are prone to spilling, this one can simply be sprayed directly onto the nails to wipe away applied color with a cotton pad.

Alongside innovative products like this spray nail polish remover, there are also polish remover wipes, pastes and even nail polish products that can be applied in the form of a spray. Across the beauty industry, consumers are seeking out reformatted versions of their favorite products to reduce the potential for messes and spills.
