

Spireor® respiratory protection masks protect the user against the risk of inhaling infectious particles - such as dusts, pollution, viruses, allergies... for use in intensive physical activity.

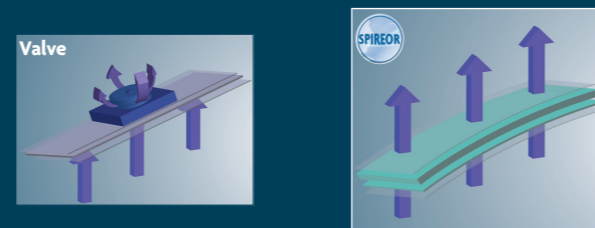

Patented innovation

Inhalation breathing resistance

On breathing in, the entire filter fabric of the SPIREOR® mask purifies the inhaled air. Therefore it acts effectively against solid and liquid particles, but without resisting air flow.

Exhalation breathing resistance

On breathing out, the entire available surface facilitates the passage of exhaled air. Breathing comfort is considerably increased, with very high level protection.

A high-tech response, abandoning the old valve mask technology and adopting the new technique of mechanical microfiltration by technical fabrics with electrostatic properties.

Enhanced respiratory & filtration performance due to the technological advances in the ultralight non woven material found in the SPIREOR® masks.

User comfort that radically changes the user's perception of the mask.

1. Together with IPSOS, we performed a series of tests and quality assessment with professional users in the building trade, manufacturing industry and automotive body shops. The results speak for themselves: "It's soft. Once you put it on, you forget it", "dust doesn't get in, because the nose piece makes it very leaktight", "it's light and you sweat less".

Features :

- New breathable technology.
- Optimal filtration.
- Active reduction in leakage.
- Ergonomically designed to fit most faces.
- Ultra light weight non woven material.
- Duel hard wearing elastic straps.
- Encapsulated adjustable nose clip.
- Hypoallergenic and ultra soft technology.
- Individually wrapped for hygiene.
- Shelf life of five years.
- Latex & PVC free.
- Both EN149 & EN14:683 tested.

Composition :

- Filter media : polypropylen.
- Elastics : polypropylen, polyamide, elastane.
- Nose piece : steel and polypropylen.

ISO 9001 quality management system.

Made in France.

More than 80 % of the mask is recyclable. Production waste are 100 % recycled.

Latex and PVC free.

EN 149 : 2001

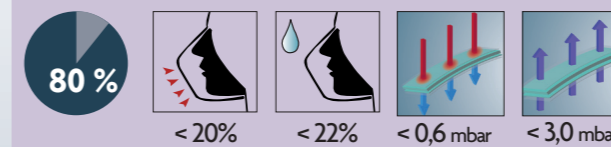

Standards

Our Valmy masks meet basic safety requirements laid down by the Council Directive 89/686/EEC. They meet all relevant European Standards. EN 149 : 2001 by a notified body. Classification by three filtration levels : FFP1 – FFP2 – FFP3.

Maximum values permitted to comply with EN 149 : 2001

FFP1

VSP 152

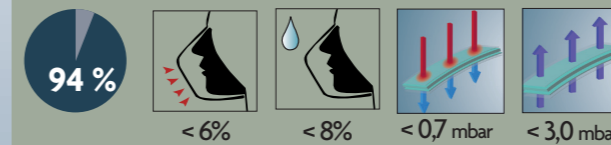

Non toxic dusts : cellulose, cotton, flour, clay, vegetable and mineral oils Anti-pollution.

Industry textile, food processing, DIY, hygiene & cleaning, etc.

FFP2

VSP 252

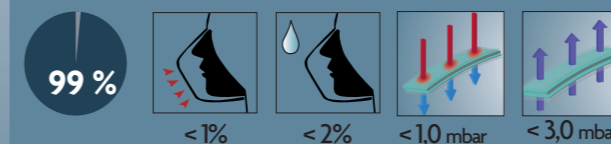

Dusts such as concrete, cement, plaster (demolition, plastering work, sanding), softwoods (sanding, cutting) fine particles of paints and resin, plastics (blasting, sanding) - Antivirus (Avian flu, SARS, Tuberculosis), anti-pollution, anti-allergens.

Industry, public works, DIY, woodworking, automotive industry, body work, healthcare, etc.

FFP3

VSP 352

Asbestos fibres in concentrations < 1 fibre/cm3/h (handling of equipments, diagnosis), dusts from rocks wool, glass fibre (handling, insulation work), lead (paint stripping), hardwoods, metal fumes - Antivirus (infectious respiratory diseases), anti-bacterial (legionnaires' diseases).

Industry, public works, woodworking, metal work, healthcare, etc.
