NURSERY STOCK AVAILABLE
MID - DEC THRU MID - MARCH

GO TEXAN.

Every morning when I walk out the door, my livelihood relies on agriculture. Womack Nursery Company now encompasses over 4,500 acres of nursery, cattle, rowcrop, and orchards. Our hope is

to provide the most reliable nursery stock for the South. We also strive to provide all the knowledge necessary to help the customer. I find myself in the fortunate position of supplying information to customers that are new to agriculture as well as the seasoned farmer.

I am always humbled when looking back at the 83 years we have been in business. Every tree takes years of care and patience to come into maturity and many people have worked diligently to make these trees grow along with this business. I consider our employees to be more like a family.

Womack Nursery has been a labor of love since 1937, and has been passed down from father to son for four generations. I consider myself very lucky to be able to work alongside my father and my son. Together we have over 120 years of knowledge in establishing orchards, proper maintenance, and profitable production. While no year is ever the same, with my family's extensive knowledge we feel we are capable of embracing most challenges because we are all skillful in different stages of orchard crop production. We use our experiences to see that our customers have the best chance of success whether they are buying one tree or 100,000.

Larry D Womack

Field Fresh Pecan Trees

We strive to supply our customers with trees which are freshly dug. Pecan roots are very susceptible to damage from drying out. Trees are carefully packed with moisture retaining material around the roots to maintain a damp condition while in transit.

Pecan trees are a perishable product. The "liveability" of field fresh pecan trees is much greater than trees which have been dug for weeks or months and are carelessly handled.

You will find us referring to western and eastern varieties in this catalog. Eastern varieties are resistant to leaf disease, thus are more able to grow in humid areas. These eastern varieties can be grown satisfactorily in the West. We do not recommend western varieties in the East because of leaf disease problems. For a rough boundary line for eastern and western varieties, draw a line from San Antonio through Ft. Worth to Tulsa.

LIPAN PECAN (1)

High nut quality and yield potential. Medium early nut yield. Excellent scab disease resistance.

LAKOTA (2)

High yielding and early maturity. Scab resistant. Does well in Texas and northward.

WICHITA (2)

Consistent bearer of heavy, high quality nuts. Does best in west Texas. 18 - 24" & 2 - 3' ONLY

SIOUX (2)

Smaller, easy shelled pecan. Wonderful taste. Does well in central Texas and westward.

WACO (1)

Nut shells out into halves. Mid season ripening. Good western variety

WESTERN (1)

Well shaped nuts with paper thin shells. Does best in dryer climates. 18 - 24" & 2 - 3' ONLY

BURKETT (2)

Large, round nuts, fill out well and a good producer. Not adapted to South or East Texas. Western variety, very popular. • One of the best tasting oily nuts, but unattractive tree.

CADDO (1)

Highly productive. Small nut, with excellent quality. Very disease resistant. Eastern variety.

CHEYENNE (1)

Bears medium sized high quality nuts. Heavy bearer.

CHOCTAW (2)

Large, high quality egg shaped nut. Shows good resistance to pecan scab.

PAWNEE (1)

Early maturing variety. Large, easily shelled quality nut. Does best in dryer climates.

DESIRABLE (1)

Consistent, early, moderate yield, high quality nuts. Popular eastern variety.

(1) Indicates early pollen shedding, Protandrous.

(2) Indicates late pollen shedding, Protogynous.

pecans cont.

OCONEE (1)

Excellent sheller. High quality paper shell nut. Good disease resistance. 2-3' & 3-4' ONLY

KANZA (2)

Bountiful harvest of smaller pecans. Very scab resistant, early producing. Bred for durability in a cold climate.

HOPI (2)

Consistent producer of quality nuts in the western region. Outstanding nut quality. 4-5' & UP

NACONO (2)

Mid season maturity, superior nut quality. Excellent scab resistance. 2-3' & 3-4' ONLY

PODSEDNIK (1)

Propagated normally as a novelty tree, due to its large size pecans. Good eastern variety. As large as 22 per pound.

MARAMEC (2)

Bears large attractive flavorful nuts. Vigorous tree. Does well in eastern Oklahoma. Available only in sizes 6' and up and only available for pick up at nursery. 7-8' & 8-10' PICK UP ONLY

APALACHEE (1)

Oblong, high quality paper shell nut. High yield potential with excellent scab disease resistance. Pollinate with Choctaw, Kanza, Lakota, Nacono, Hopi and Wichita. THRU 4-5'

APACHE (2)

Burkett-Schley cross. Heavy yielding, good nut filling. Kernels are smooth and bright. This variety does well in our local area and in western planting. • This is the most overlooked tree we have, along with Hopi, the perfect yard tree for I-35 West. THRU 4-5'

(1) Indicates early pollen shedding. Protandrous.

(2) Indicates late pollen shedding. Protogynous.

PECAN PRICES 2018-2019

BUDEDDED PECAN VARIETIES: LOKATA, WICHITA, SIOUX, APACHE, WESTERN, CADDO CHEYENNE, CHOCTAW, PAWNEE, DESIRABLE, OCONEE, KANZA, HOPI, NACONO, PODSEDNIK AND WACO.

This year we will have Kanza, Pawnee and Lakota available on northern rootstock. These varieties on northern rootstock are more adaptable to Interstate 40 and above.

Add \$3.00 to each rate on Budded Pecan price.

No more than 2 [4 - 5'] pecan trees can be shipped by UPS or USPS due to package size limits. If shipment of larger trees is desired, the shipment method will be Motor Freight at the expense of the customer. Can also be picked up at the nursery. Some varieties in 8 - 10', and larger quantities of larger trees, will be available for pick up at nursery only. Factor in shipment method: pecan trees shipped out of Texas, will be a minimum of \$45.00 delivery.

Classic Pecan Pie Recipe
on page 25**

pecan oil

KINLOCH PLANTATION PECAN OIL

Pecan oil is lower in saturated fat than olive oil.
Pecan oil is neutral in flavor.
Pecan oil has a very high smoke point of 470 degrees.
Pecan oil is lighter than olive oil and is suited for everyday healthy cooking.
Pecan oil is a good substitute for butter, which makes it good for baking.

A healthy alternative to other oils.

Peach Trees

The following trees are grafted and budded to a nematode resistant root stock. We also offer Halford rootstock, which is better suited for High pH soils [Austin, San Antonio, DFW], and any soil where white rock and caliche are prevalent. Ripening dates are approximate for Central Texas Area. Chill hours are 45° or below.

TROPIC SNOW

Sweet, low acid white fleshed freestone. Ripens May in The South. 200 Chill Hours.

EARLIGRANDE

Large to medium semi cling fruit. Yellow skin with a red blush. Ripens May in South. 275 chill hours..

TEXKING

Large red freestone, with firm yellow flesh. Ripens end of May. 400 chill hours.

FLORDAKING

Medium sized yellow cling flesh fruit. Ripens mid May. 450 chill hours

RIO GRANDE

Large, firm, yellow fleshed freestone. Yellow skin with a red blush. Ripens mid June. 450 chill hours.

TEXSTAR

Sweet, firm, delicious, semi cling fruit. Yellow, red blushed skin. Ripens early June. 450 chill hours.

LA FELICIANA

Medium sized sweet, juicy yellow freestone flesh. Attractive red blushed skin. Ripens June. 550 chill hours.

JUNEGOLD

Large red blushed freestone with yellow flesh. Ripens June. 600 chill hours.

TEXROYAL

Consistent producer of large red, yellow fleshed freestone fruit. Ripens mid June. 600 chill hours.

PF LUCKY 13 Pat# 14384

A large yellow freestone peach with very good resistance to bacterial leaf spot. Semi-dwarf. Holds well on the tree after maturity. Ripens June 25 to July 10. 600+ chill hours.

HARVESTER

Reddish yellow freestone peach, with yellow flesh. Ripens mid June. 750 chill hours.

RANGER

Large, reddish yellow freestone flesh peach. Ripens mid June 15 - 20th. 900 chill hours.

NEW DIXIED

Sweet, yellow fleshed cling. Ripens mid June. 950 chill hours.

NEW SENTINEL

Excellent quality, large semi-freestone. Ripens early June. 850 chill hours.

MAJESTIC

Deep yellow freestone flesh. Large, round, red blush over yellow background. Ripens early July. 800 chill hours.

BOUNTY

Large, round yellow flesh freestone. Ripens July 4th. 800 Chill Hours.

LORING

Large firm freestone. Eye appealing yellow reddish color. Ripens July 10th. 750 chill hours.

JULY PRINCE

Large, flavorful yellow flesh, freestone. Ripens late July. 850 chill hours.

REDHAVEN

Creamy yellow fleshed freestone peach. Red blushed over yellow skin. Ripens July 1st. 950 chill hours.

CONTENDER

Juicy, large, yellow fleshed freestone. Consistent producer. Ripens mid July. 1050 chill hours.

NEW RUSTON RED

Reddish freestone,. Consistent producer, very good, ripens early to mid July. 900 chill hours.

RED GLOBE

Large, round, dark red skin. Juicy yellow freestone flesh. Ripens July 4th. 850 chill hours.

REDSKIN

Large yellow flesh freestone. Ripens July 20 - 25th. 750 chill hours.

DIXIELAND

Large, sweet, yellow flesh. Yellow skin with a red blush. Ripens July 25th. 750 chill hours.

ELBERTA

Juicy, yellow flesh, freestone. Ripens July 20 - July 31st. 850 chill hours.

DENMAN

Yellow, sweet, freestone. Ripens mid July. 800 chill hours.

MONROE

Large, flavorful, yellow flesh, freestone. Ripens August 15th. 850 chill hours.

JEFFERSON

Large, yellow flesh freestone. Red blush over bright yellow background. Ripens early August. 850 chill hours.

NEW CRESTHAVEN

Beautiful golden yellow freestone flesh. Ripens mid August. 850 chill hours.

RED BARON

Large, juicy, sweet yellow flesh freestone. Showy,, large double red blooms. Ripens end of July. 700 chill hours.

BELLE OF GEORGIA

Large, firm, very sweet white freestone flesh. Low acid. Ripens July 20 - August 1st. 850 chill hours.

INDIAN CLING

White, cling flesh, colored red next to the seed. Ripens July 20th - August 1st. 750 chill hours.

NEW AUGUST LADY

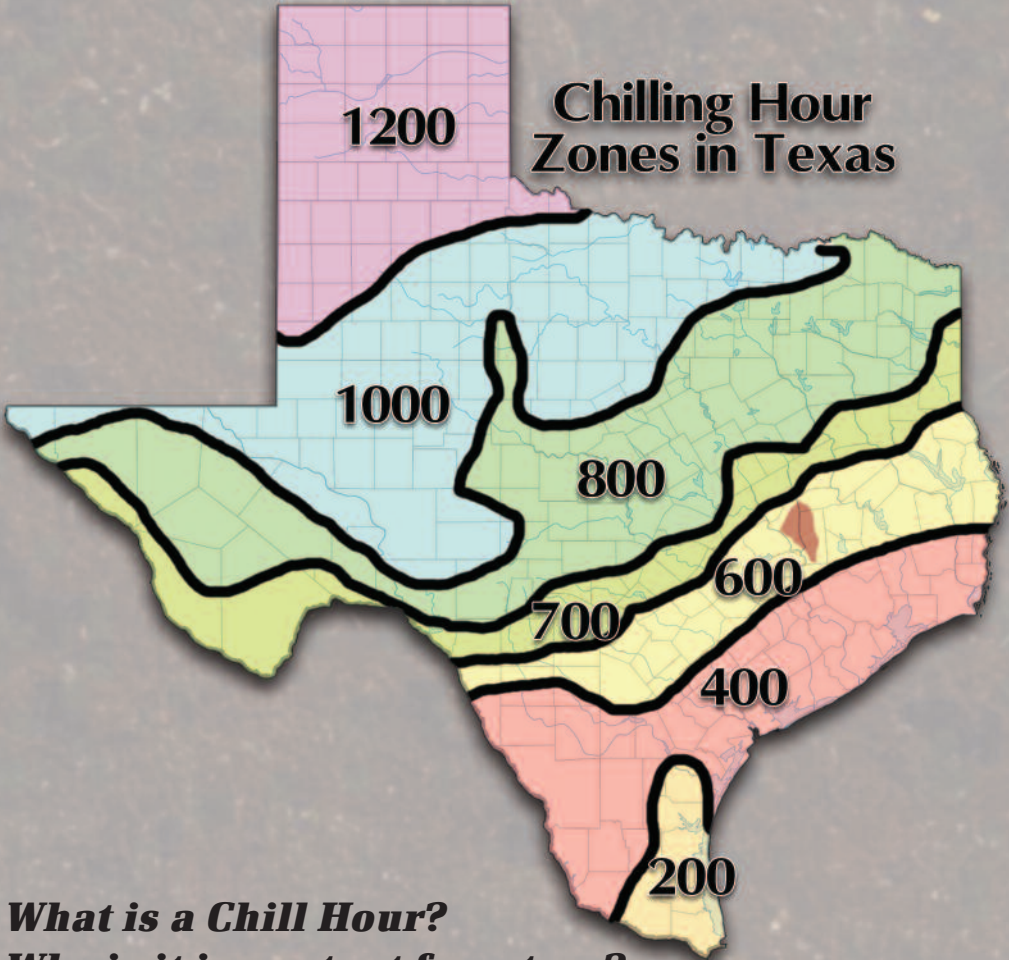

Sweet, yellow, freestone. Ripens early August. 750 chill hours.

BIG RED

Beautiful large 2" - 3" yellow freestone. Firm fruit, red blush skin. Ripens mid August. 750 chill hours.

peaches cont.

What is a Chill Hour?

Why is it important for a tree?

When choosing fruit trees from our catalog, you will notice some extra numbers listed with each variety. These are the amount of chill hours that this particular tree needs in order to thrive and produce fruit. If a tree does not receive enough chill hours in the winter, the flower buds may be sporadic in opening in the spring, or they may not open at all. Choosing a tree with low chill hour requirements and planting it in a high chill zone area, will cause the tree to bloom early. Blooms will be frozen, and it could also result in death of the tree. Planting a tree that has a high chill hour requirement and planting it in a low chill hour area, will result in no blooms. Be sure to match your choice of tree with the location where it will be planted. A chill hour is the number of hours 45° or below.

Halford Rootstock

These varieties are available on Halford Rootstock. Halford Rootstock is recommended for high Alkaline soils. This soil is primarily up and down the I-35 corridor.

Medium sized fruit with cranberry red skin and light to deep red arils. Small seed. Ripens October to November. Good for far south Texas. 2-3' \$20.75 EACH

PINK SATIN

Medium to large fruit. Small edible pink arils. Punch like flavor. Good for far south Texas. 18 2-3' \$20.75 EACH

NEW SUMBAR

An early ripening variety with sweet fruit and soft seed. It has survived very cold winter conditions in the Fredericksburg Texas area, but one should be aware of potential cold injury problems if moved too far north. Sumbar comes from Turkmenistan.

NEW SPANISH SWEET

Produces large red fruit and arils with hard seeds. The fruit has a sweet but very tart taste. The plant is cold tolerant and very productive and ripens mid-October. This variety was disseminated as "Spanish Sweet" from Texas A&M AgriLife Research and Extension Center at Uvalde.

NEW SURH ANOR

From Russia. It is consistently productive and produces a large fruit. Arils are usually alternately clear and red speckled. Ripens in mid-October and has a high sugar content.

KANDAHAR

An ancient and heirloom pomegranate variety.

POMEGRANATE PRICES

18-24" \$17.50
2-3' \$20.75

Asparagus

HYBRID UC 157 ASPARAGUS

Classic Pecan Pie Recipe

recipe

Submitted by: Emily Caruso, Jelly Toast

The classic pecan pie is a must-have dessert at Thanksgiving and other holidays throughout the year. This recipe holds true to tradition with buttery pecans and is simple to make calling for a store-bought or crust of your choice.

15 mins Prep | 70 mins Cooking

INGREDIENTS

2 1/2 cups raw pecan halves
1 9-inch pie dough
(store bought or homemade)
6 tablespoons unsalted butter
melted and cooled
1 cup light corn syrup
1 cup light brown sugar
2 teaspoons pure vanilla extract
3 large eggs, lightly beaten
1/2 teaspoon salt

METHOD

Place baking sheet in oven. Preheat oven to 350 degrees F.
Gently line pie pan with rolled out pie dough. Be sure to press into edges and up the sides. Use fingers or a fork to create a decorative edge of your choice. Set aside.
In a large bowl, whisk together butter, corn syrup, brown sugar, and vanilla extract. Add eggs and salt and whisk until mixture is even. Fold in pecan halves.
Pour mixture into pie crust and spread evenly with a spatula. Take pieces of aluminum foil and gently cover edges of pie crust. Place pie on preheated baking sheet and bake for 60 to 70 minutes or until pie is set in center.
Remove pie and allow to cool completely before serving or chilling. Pie can be made the day ahead and refrigerated overnight. Allow pie to come to room temperature before serving.

supplies

POLE SAW

Silky Pygar Telescoping Pole Saw (S-78)

A heavy duty saw which will maintain cutting ability after heavy use. Pole is in 3 telescoping sections and is oval shape for extra strength. Length of pole and height of average person will allow removal of limbs 20 feet or more from the ground. \$231.00 ea.

Replacement Blade for above pole saw

Part No. S-78-3 \$87.75 ea.

TEXAN NUT SHELLER

Popular nut sheller. Heavy contoured aluminum handles with plastic grips. Sharp tempered steel blades set at just the right angle for shelling.

Nut Sheller \$14.50 EACH

Repair Kit (Blades & Spring)

\$14.25 EACH

LOPPERS

BAHCO P116-SL-60 LOPPER

Super light professional series. 1.25-inch cutting capacity; 24" overall length. \$85.00

BAHCO P116-SL-70 LOPPER

Bypass lopper for pruning and training all kinds of vines. Especially made for landscaping activities. Cuts branches up 1 1/4". \$95.00

BAHCO P280-SL-80 LOPPER

Heavy duty lopper. Cuts branches up to 1 1/2". Rubber bumpers, 32" handles. Replaceable blades. \$108.00

BAHCO P16-60F LOPPER

Bypass lopper for training and pruning fruit trees and vines. Cuts branches up to 1 1/8". 24" handles. \$85.00

BAHCO P160-90 LOPPER

Super light professional series. Cuts up to 1.75". Rubber bumpers. Replaceable blades. Total length 36". \$112.00

FELCO 210A-50 LOPPER

Durable aluminum handles. 20" long. Curved cutting head. Cuts up to 1 1/4". \$95.00

FELCO F600

Folding Saw \$28.00

HOLT'S 14" NUT WIZAARD

Rolls smoothly over the ground as it picks up the nuts. It does not pick up leaves. Wire dumper attaches to a 5 gal. bucket. \$48.00

BAHCO Bow Saw #331

A small and handy bow saw for all - round use suitable for cutting both dry and green wood. 21 inch replaceable blade \$18.75
Replacement blade for #331 bow saw \$5.00

SHEARS

FELCO #2

Our most popular model \$58.00

FELCO #6

Popular for smaller hands \$58.00

FELCO #7

Rotating handle reduces wrist fatigue \$72.00

FELCO #8

High leverage makes pruning easier \$57.00

FELCO #9

Left handed version of Felco #8 \$57.00

FELCO LEATHER HOLSTER

For one sheere with belt clip \$11.00

LEONARD

TRADITIONAL BYPASS PRUNERS

1" cutting capacity. Pivot locking mechanism. Anti slip grips. Vinyl coated handles. Replaceable blades and spring, 8.5 inches overall length. Best economical pruner on the market today. \$28.75

WARRANTY & PLANTING SUGGESTIONS

QUANTITY RATE - In using the 10 rate, it is not necessary to order 10 of one variety. You may want to order ten peach trees and select the varieties you want - the same rule applies to other trees where the 10 or 25 rate is given. DOES NOT APPLY TO BERRIES.

SHIPPING SEASON - Generally, our shipping season starts about December 15 and ends in March.

WARRANTY - All nursery stock is guaranteed to be true as labeled. If any stock proves untrue to label, the seller shall be liable to purchaser for purchase price only. All nursery stock guaranteed to leave our warehouse in good condition. If stock should arrive in unsatisfactory condition, notify Womack Nursery within seven days. Womack Nursery will guarantee plants to leaf out after being planted according to directions, or we will give 1/2 price credit toward purchase on another plant. We request that customers be honest with us in this matter and that we be notified by **June 1st** in the planting season. The 1/2 price replacement guarantee does not apply to stock sold at volume discount or end of year discount pricing. Please keep in mind that Womack Nursery Co. is not liable for natural plant death such as flood, drought, insect, disease, freeze damage or mechanical injury. Replacement trees will be charged full shipping rate.

PECAN PLANTING OBSERVATIONS AND SUGGESTIONS

Your first consideration in planting is determining if your soil and site are suitable. Some factors to consider are:

- Is my soil well drained
- Are large trees nearby which will compete for moisture, nutrients and sunlight?
- Is my soil a good pecan soil?
- Are pecans in immediate area growing in a similar soil type?
- Will the site allow for air movement around the tree and not be a trap for moist and/or cold air?

We urge our customers to be ready for the trees when they arrive. The trees are packed at our nursery to maintain moisture in the root zone. If you are not able to plant upon arrival, check for moisture around roots, add water if necessary and reseal package. If weather is extremely cold, hold in an insulated building or straw covered in a barn or shed.

planting tips

PEACHES, APRICOTS, NECTARINES, APPLES AND PLUMS

The roots on these trees should be trimmed so as not to be bent around when set. Trim branches back to about 6 inches. When the branches start growth, select 3 or 4 branches and keep the others cut off.

Holes for fruit trees are not required to be more than 1 foot deep and foot across. Plant the tree back to where they were growing in the nursery row.

It is important to water these trees after planting to settle the soil around the roots. Many growers prefer to remove 1/2 of the top when planting fruit trees.

ROSES

1 to 2 year old container grown plants. When received, they will have been taken out of the container. Prepare the bed or rows by spading up well. Place root ball at ground level or a little above. Back fill with soil and water thoroughly. Mulch will help to cool roots during periods of hot weather.

BLACKBERRIES

We like to plant berry plants about 1 inch deeper than they grew in the nursery row because of the tops being trimmed for packing and shipping. The thorny varieties will only have a small amount of tip exposed. The thornless blackberries will have about 3-4 inches of cane sticking out of the ground. Plant about 4 foot apart in row. Have rows at least 12 foot apart. Keep moist until plants start growth. A mulch will help.

BLACKBERRY ROOT CUTTINGS

Lay root cuttings **horizontally** in a 2-4 inch deep trench. Water in well and cover with soil. Mulch the area lightly to conserve moisture.

GRAPES

Grapes will mostly come untrimmed, just as they were in the nursery row. Some varieties will be pre-trimmed for planting. To prune a grape for planting, remove the top growth back to a single spur with 3 or 4 fussy end nodes. Trim the roots back to about 3 or 4 inches.

Plant the grape to the same depth as it was growing in the nursery row. The hole will need to be approximately 6 inches across and about 8 inches deep. Pack the soil around the roots and water thoroughly, to remove the air pockets from the hole. Plant grapes 8 - 12 ft. apart in rows, and plant your rows 12 - 15 ft. apart.

(KEEP ROOTS OF PECAN TREES COVERED AND MOIST WHILE PLANTING.)

Hole size will be determined by tree size. Usually a 10" diameter hole is sufficient for a 3-4' tree. Trees 7-8' may require 3' holes 16" across. We recommend that the side roots be trimmed to fit the above size holes. We like for the base of the root to rest on firm soil and the tree be planted at the same depth as grown in the nursery row. It is acceptable to plant 1/2" deeper, but do not allow any of the root to be showing after planting. Replace soil which was removed from hole and pack and water the loose soil around roots. If the hole cannot be dug as deep as the length of the taproot, cut off the bottom of the taproot so that the tree is planted at the proper depth. Some growers with heavy soils prefer to cut the tap root to a short length of 12-18". Some growers also prefer to remove 1/3 of the top when planting pecan trees.

For many years peat moss has been recommended as a planting addition for heavy soils. Most commercial growers now agree pecan trees transplant better when soil which is removed from the hole is returned to the hole along with the tree roots. The peat moss addition will create a much looser soil texture around roots as compared to the surrounding soil. This condition will increase the possibility that the hole will become waterlogged and the pecan roots will sour before growth begins.

Do not be anxious to form the perfect shaped tree. We like a "trashy trunk" i.e., a trunk with many small branches. This growth on the tree trunk helps the tree become re-established and will also hasten trunk diameter growth. A long, slim trunk with only a bit of top growth is subject to sunscald and winter injury. The "trashy trunk" can be gradually removed in 2-3 years as the tree becomes re-established.

In selecting branches to serve as permanent limbs, keep in mind that the wide angle branches are the strongest. Limbs which form a narrow crotch are weak and will usually split at the weak crotch.

CAUSES OF PECAN TREE TRANSPLANTING FAILURE

1. Lack of soil drainage.
2. Failure to settle soil around roots.
3. Lack of water & failure to control weeds.
4. Too much water - This is especially a problem when soil drainage is poor.
5. Fertilizer used in hole with newly planted tree.
6. Allowing roots to dry during transplanting.
7. Herbicide damage.
