

AC WORKS®

POWER SOLUTIONS TO FLOOD RESTORATION EQUIPMENT

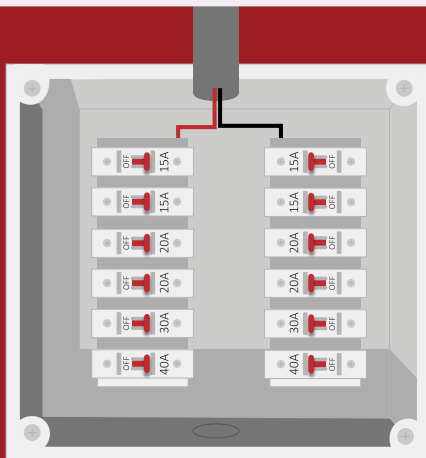

AC WORKS® brand product solutions work with the equipment used to provide flood restoration, mold remediation, bed bug removal, high-power heaters/dryers, power distribution cubes/spiders, and more. Solutions provided will power your Air Movers (fans), radial heaters, dehumidifiers, and other necessary equipment. Whether you will daisy chain your equipment or not, we have solutions to keep your equipment working without tripping the circuit.

Each power input inlet in your equipment requires a separate circuit. The inlets in your equipment require 3 or 4 separate circuits, depending on how many inlets you have. Powering all of them into the same circuit breakers will likely cause your breaker to trip. Our products can withstand up to 15 Amps per circuit without tripping the breaker.

Tips to Avoid Tripping your Breaker

1. Use our AC WORKS® Adapters.
2. Use outlets in multiple locations so they aren't likely connected to the same circuit.
3. Use a circuit breaker finder to distinguish different circuits.

**NEMA 14-30
Dryer Outlet**

The 4-prong dryer outlet has two 30 Amp hot circuits with a maximum operating power of 7500 Watts.
