

GETTING STARTED WITH ORENDA

SETTING UP YOUR MACHINE

STEP 1: INSERT WATER RESERVOIR

Remove the water funnel on the side of the device. Slide in the water reservoir and make sure the mark on the water reservoir aligns with the mark on the machine. Twist the water reservoir clockwise while slightly pushing down. You should feel a tight seal. Put back the water funnel.

STEP 2: INSERT BREWING CHAMBER

Add the stopper into the base of the brewing chamber, then add the metal filter on top. Slide into the brewing chamber arm and push down until you feel a tight seal.

STEP 3: INSERT DRIP TRAY

Combine the top metal piece of the drip tray and the bottom piece of the drip tray. Place this into the funnel underneath the brewing chamber.

BREWING YOUR FIRST CUP

1. ADD FILTERED WATER

Slide open the water funnel on the left hand side of the device. Using the beaker or your water filter, pour water into the funnel. Make sure the water is higher than the minimum water mark and lower than the maximum water mark. Make sure the bean hopper is always closed when pouring in water.

2. ADD COFFEE BEANS

Open the lid on top of the grinder and pour in your freshly roasted bean.

3. ADD PAPER FILTER

Slide open the water funnel on the left hand side of the device. Using the beaker or your water filter, pour water into the funnel. Make sure the water is higher than the minimum water mark and lower than the maximum water mark. Make sure the bean hopper is always closed when pouring in water.

4. BREWING

Press the middle cup icon. Once you feel the first vibration and the light changes color to red, this means brewing is in progress. Please don't touch the brewing chamber while brewing is in progress.

CLEANING YOUR ORENDA

1

Clean Brewing Chamber

After brewing, remove the brewing chamber & toss up the paper filter. If you're not using a paper filter, give the brewing chamber a good rinse. Place the brewing chamber back into the brewing arm. Place a cup or a beaker underneath.

2

Start Cleaning Cycle

Hold the clean icon until the first vibration. This will start the cleaning cycle. Once done, remove the cup or beaker and throw the water.
