

Folding Square Ruler

By Home Sewing Depot

You may have seen a carpenter's square- a metal guide in the shape of an "L" that is used to measure 90° angles like this example.

The Folding Ruler is made of polycarbonate which will not break, crack or chip.

It folds at the 45° angle for easy use and storage

3.5" x 16" Folding Rulers and 6" x 24" Folding Ruler

The black graphics are printed on the underside of the ruler to prevent shadows and distortion. The ruler is broken into 1/8" increments for accuracy. Also, there are 1/4" seam allowance lines around the border.

The square folding ruler can be used for creating square borders and mitered corners. To create mitered corners, simply fold one arm over to create a 45° edge.
