

## Argus Group

The Argus Group is a multi-line insurance and financial services organization offering a full range of insurance, pensions, investments, broking, healthcare management, and medical services. Their extensive operations span multiple regions, including Bermuda, Malta, Gibraltar, and Canada.

## Challenges

Before implementing Omni Power Stations, Argus Group faced power accessibility challenges due to the need for open-plan offices, hot-desking environments, and hoteling stations. The lack of power outlets in these dynamic workspaces made it difficult for employees to charge their devices conveniently without relying on extensive wiring, which also cluttered the workspace and created trip hazards.

## Omnicharge Solution

To solve these issues, Argus Group integrated Omni Power Stations across their offices in Bermuda and Canada. The portable, high-performance charging stations provide rapid-charging solutions that allow employees to stay powered up in various spaces without the need for fixed docks or cumbersome cables.

The flexibility of the Omni Power Stations aligned perfectly with Argus Group's modern office setup, where mobility and open collaboration are key. Employees can now move between floors, hot desks, and collaboration rooms with ease, ensuring productivity is not disrupted by a lack of power access.

## Key Benefits

**Enhanced Mobility:** The portability of the Omni Power Stations allow employees to work anywhere within the building, from hot desks to meeting rooms, without needing to be tethered to a specific power outlet.

**Seamless User Experience:** Employees quickly adapted to using the Omni Power Stations thanks to their intuitive design. The rapid-charging capability has been particularly well-received for laptop charging, allowing users to stay connected and productive throughout the day.

**Wireless Setup:** The Omni Power Stations eliminated the need for extensive wiring, reducing clutter and creating a safer, more organized workspace. This was especially beneficial in Argus Group's meeting rooms, where sleek, wireless charging replaced the previous tripping hazards caused by cables running across the floor.

## Results

Since implementing the Omni Power Stations, Argus Group has seen an improvement in workspace efficiency and flexibility. The freedom to move between workspaces without losing access to power has enhanced collaboration, particularly in their open-plan offices and meeting areas. The Omni Power Stations have also streamlined power management during high-stakes meetings by providing executives with portable, easy-to-use charging solutions.

## Feedback

Sjoniece Wolffe, IT Services Delivery Manager, expressed satisfaction with the solution, noting: "We mostly promote usage for laptop charging as it provides 'rapid charging' and allows our users to charge their laptops in any space within the building."

She added, "The Omnicharge units are intuitive and easy for users to operate. It's been great to see how our team has embraced the flexibility they offer, whether they're in a hot desk, meeting room, or our large collaboration space."

## Overall Satisfaction

Argus Group rates their satisfaction with the Omni Power Stations highly and would recommend them to other organizations looking for reliable and flexible charging solutions to enhance workplace productivity.
