

# A NEW RANGE OF NURSING EQUIPMENT FOR THE DAIRY FARMER

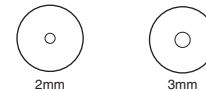

# Leak-free Nipples

Our inserts nearly eliminate wasted milk while nursing. The embedded silicon membrane will only let milk pass while the calf is suckling, functioning naturally like a real cows teat.

## Control Flow

The implementation of an insert has allowed us to introduce a round opening at the tip of the nipple. This 2mm hole controls milk flow while the calf is suckling, increases longevity of the nipple and eliminates tearing. Narrowing the neck of the nipple in combination with our soft-touch synthetic rubber closely mimics a cows teat promoting nursing for adequate feeding.
