Scientifically Based Courses

These guidelines are to be followed to promote public safety and ensure course content is based on the most current science available on the subject. As course subject matter of botulinum toxin and dermal filler injectables is constantly evolving, as well as our other live patient courses i.e., Implants; scientifically based risks and benefits will always be made known to all participants and live patients:

- 1) The content of all our live patient courses has been created and updated in accordance with standards and published data from both the Food and Drug Administration and the manufacturer of drugs, i.e., botulinum toxin and dermal fillers used in our courses. Example: During live patient treatment, during our Therapeutic Botox Courses, all reconstitution and injection of botulinum toxin follow the most current manufacturer recommendations and guidelines.
- 2) In order to stay current on latest data and research available, consequently being able to update course content to current standards:
 - a) Our instructors attend lectures and courses at minimum once annually on the topics related to the courses taught for Advanced Dental Institute.
 - b) Our instructors as well as Advanced Dental Institute, receive updates via newsletter emails from manufacturers of all products used in courses
 - c) Our instructors preschedule monthly meetings with the product manufacturer representative to receive updates on course product recommendations and guidelines as well as FDA pages on all products used in courses
- 3) Our course content is reviewed by Planning Committee to ensure an unbiased, authoritative view of subject matter is available for input. This provides proper representation for the safety of the public.
- 4) No course content will ever be influenced by commercial sponsorship. Specific product names will only be mentioned as they relate to the clinically based course content.
- 5) All course participants will wear masks, be kept as apart as possible, and class sizes will be limited to abide by COVID-19 restrictions. All participants will receive step-by-step directions with explanation in the following mediums: a) Written, in their course handouts b) Verbally, by course instructor c) Visually, with the lecture's PowerPoint.
- 6) Only one live patient is treated at a time with our instructor (doctor) overseeing each participant as they inject the patient. Our instructors along with Advanced Dental Institute ensure each procedure is done safely and correctly.
- 7) As an approved PACE provider, Advanced Dental Institute will ensure ongoing compliance with PACE standards by checking the website at least monthly and receiving any mail correspondence from PACE that gives updates for CDE.
