Say-It Talking Button

Insert 3 AAA batteries, turn it on, record a message, and you're good to go! Super-simple.

Recording your message
1) **Press/hold the button for 5 seconds until you hear a beep.**
2) **Continue holding while you speak/record your message (or music). (If you're a male, speak in a slightly higher voice than normal)**
3) **Let go within 20 seconds and you'll hear a second beep.**

Switch Input (if ordered)
1) **Plug external switch into port. If the switch has a control box or battery, you might need to use the included Polarity Reverser cable.**

Switch Output (if ordered)
1) **Plug included 'patch' cable into port on Button.**
2) **Plug other end into device/toy.**
3) **If that doesn't work, use the included Polarity Reverser cable.**

Mounting Kit (if ordered)
1) **Apply 2 drops of super-glue to the *outside* of the ridges surrounding each rubber 'foot' on the bottom of the Button.**
2) **Attach the plastic disk, with washers facing the button, to the bottom of the button, aligning the washers with the feet. The washers will contact the super-glue and form a permanent bond.**
3) **Use the enclosed Super-Velcro to attach the disk/button to one of our Arms with disk, or a table or laptray.**
4) **The disk is attached to the washers by our Super-Velcro. Use a credit card to separate the Velcro's.**
5) **View a video of this process at <www.youtube.com/watch?v=rNTkcvVjF1I>.**

That's it! Enjoy!
