

SPRING 2023

PRODUCTION DETAILS - ENVIRONMENTAL

The most sustainable product is one that never needs to be replaced.

Materials & Sourcing:

- Our patented hardware is designed to eliminate glue joints or fasteners where furniture often fails.
- Easy repair and part replacement is central to our system design, prolonging the life of the furniture.
- We source almost all our raw materials domestically to minimize the distance in transit. Exceptions are leather for upholstered products, and our custom torque wrench utilized in assembly.
- Our patented hardware is made of aluminum and stainless steel, both infinitely recyclable.
- We use North American hardwoods sourced through sustainably managed forests.
- Seat and back panels in our seating products are created using bent lamination.
- The finishes we apply to our wood are oil-based and VOC free.
- Fyrn offers leather as our standard upholstery material; Italian hides sourced via a domestic importer.
- Upholstery material is stretched wooden seat & back panels using adhesive and metal staples.
- Upholstered seats are layered with a 1/8th" layer of foam.
- The Stemn seating line ships flat, drastically reducing shipment volumes and emissions in transit.
- Our custom packaging, when applicable, is compostable and recyclable, protecting furniture in transit without the use of plastic or styrofoam.
- Our base of manufacturing is in Sparks, NV 89431.
