

Care and Maintenance

- Clean your PCR using a mild soap and lukewarm water. Never bleach or attempt to dye the belts because this could seriously affect their strength.
- Keep the belts free of polish, oils, chemicals, and particularly battery acid.
- Never attempt to make modifications or changes that will prevent the PCR from operating properly.
- Keep sharp-edged or damaging objects away from belts and other parts of the child restraint system.

PCR INSTALLATION

1 Place PCR on seat as shown.

2 Unfold PCR and place on seat as shown.

7 Pull belt located at front of PCR cushion around front of school bus seat cushion and let belt hang.

8 Hook belt from step 4 to snap clip on belt from step 7. Adjust to create a snug fit.

3 Drape PCR top belt over school bus seat back and let belt hang down.

4 Locate belt that comes out of bottom of PCR cushion.

9 Hook top belt from step 3 to snap clip on bottom belt from step 6 together as shown. Adjust to create a snug fit.

10 Unfasten seat buckles before placing child in PCR as shown.

5 Push belt from step 4 through bight of school bus seat. Make sure belt is flat and not twisted.

6 Pull belt and PCR to back of school bus seat. Belt should look as shown when finished.
