

How to Make Hummingbird Food (Sugar Water)

Photographer: William Zittrich

Boil water, add sugar (1part sugar to 4 parts water) and Stir until dissolved. Cool before placing in feeder. Sugar water can be kept refrigerated for several weeks.

Important to change sugar water once a week when cool, Twice a week in moderate temp, and every other day if hot. Clean with warm water and a little vinegar (not soap), rinse well and refill for happy birds.
