

Honeycomb Grid and Colour Filter Guidelines

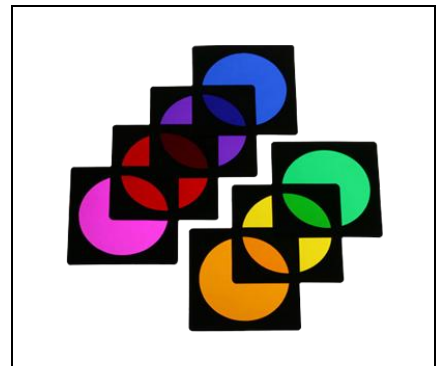

Lightrein strobes employ powerful modeling lights. When using honeycomb grids or coloured filters in **reflector/barndoor combinations**, the small enclosed space and powerful modeling light will result in overheating. Please adhere to the following guidelines to avoid overheating.

1. Do not use modeling light at full power.
2. Adjust modeling light to lower levels AND only use to for initial set-up.
3. Turn modeling light off, after you have done your set up.
4. Shoot with the Flash only.

Honeycomb Grids

Colour Filter Set

Adherence to these guidelines will prolong the life of your honeycomb grids and colour filter set and avoid overheating issues within the reflector/barndoor combination.
