

PetArk Puppy

At PetArk we have created a range of Holistically Balanced Natural Therapy Formulas which incorporate the use of 5 nutrients groups found in nature. These nutrients are amino acids, trace elements, vitamins, organic herb extracts and mineral tissue salts.

PetArk's founder, Equine and Animal Nutritional Therapist, Medical Herbalist and product formulator Antoinette Foster began developing formulas for horses for her company Hi Form in 1987. It was the success of these formulas that encouraged her to produce a range specifically designed for dogs.

At PetArk we believe you should treat the patient not the disease and treat as an individual. There is a focus on prevention before treatment; this involves achieving optimum nutrition for each dog.

puppy

Available in 300g and 600g tins

Bioavailable calcium and phosphorus

- Complete supplement for breeding bitches and growing puppies
- Superior calcium and phosphorus bioavailability for improved growth and development
