

AGGRESSOR TACTICAL ATTACHÉ CASE

From Maxpedition

By Greg Roberts

Los Angeles based Maxpedition was established in 1988 in a small workshop fabricating military specification nylon gear for hard use. They now make a multitude of gear bags to suit almost every conceivable need. I have been using a few of Maxpedition's products for the past few months.

Innovative from the start, Maxpedition gained a competitive edge in its early years by creating bags and packs with superior durability and ergonomics. The first customers were military operators and law enforcement officers, but the civilian and the 'concealed carry' markets quickly caught on, selecting Maxpedition as their preferred every day carry equipment.

The Maxpedition Aggressor Tactical Attaché case is a large tactical computer bag, which is fully padded on all sides, and sized to fit a 17 inch diagonal screen size laptop and A4 sized writing pads. On the front side of the pack, four separate pockets of varied shapes and sizes hold and organise your smaller pieces of equipment. The largest pocket has internal and external sleeves for increased capacity, plus an ID

window. Between the smaller pockets and the main computer compartment is a concealed compartment, lined with Velcro for attachment a universal CCW holster and the three-magazine pouch holders. This compartment is large enough to conceal a full size handgun and three spare magazines.

On the opposite face, a fully padded organiser opens up as a document / tool / instrument pocket with internal divisions. On either end there is a radio pocket and a water bottle pocket, both having bungee retention. The dual cinch pockets have room for the 32 fl oz (US) Nalgene water bottles or radios. Velcro loops on top of the bag can retain a collapsible baton or a flashlight. On the bottom, rubberised material keeps the bag waterproof and non-slip.

The Aggressor Tactical Attaché can be hand carried and comes with a padded shoulder strap. Main zipper pull features a button lock safety device, to prevent accidental opening. The material used in its construction is 1000 Denier, water and abrasion resistant, lightweight ballistic nylon fabric with DuPont Teflon fabric protector to protect against dirt and to make it easy to clean. The zips are from YKK and the nylon buckles are UTX-Duraflex, so quality products are used in its construction. It is available in black, green or khaki.

1: Between the smaller pockets and the main computer compartment is a concealed compartment, lined with Velcro for attachment a universal CCW holster

2: The case is a large tactical computer attaché, which is fully padded on all sides and sized to fit a 17 inch diagonal screen laptop

3: The dual cinch pockets at either end of the bag will easily accommodate the 32oz Nalgene water bottle

4: The Aggressor Tactical Attaché can be hand carried and comes with a padded shoulder strap

I have been using the Maxpedition Aggressor Tactical Attaché case on continual basis for several months, including on training courses and flying with it as well, with complete satisfaction.
