

## Light Bar Cover Install instructions

Thank you for your purchase of your new Light Bar Cover! The following are the instructions to apply with the best results and longevity of the product.

### Included

Your new light bar cover

Magnets for your light bar (additional magnets included)

Adhesive to apply to light bar

### Pre installation

For best result have your light bar laying flat on a clean surface.

Before applying adhesive make sure that the light bar is free from any debris, dirt or dust.

The adhesive is a skin and eye irritant, please be in a well ventilated area before applying.

Take off the Light bar cover tape that has the holes in place and apply that tape to your light bar and use as a magnet placement template to make sure that magnets are being placed in correct location. (Image A)

## Installation

Your cover has magnets on the light bar cover and there are magnets included in the vile. Apply the magnets that are in the vile to the to your light bar making sure that the polarity is correct. All you have to do is place a very little (puddle) adhesive on the magnet to get it to adhere. **PLEASE be patient with the drying of the adhesive!** If you do not put enough or rush the drying process of the adhesive to the magnet you will not have a strong bond and will soon see magnets sticking to the light bar or the lens cover.

In place of the included adhesive you can use liquid plastic that uses UV light to harden the material. These can be found at Bed Bath and Beyond or at select Target locations. Please check for availability at your local retail location.

Typical wait time to place the magnet on the adhesive is is 45 to an hour out of direct sunlight. Leave on longer for the best results. Slowly remove the adhesive template off your light bar as you go or once all the magnets are securely in place. This is how it should look when the magnets are on the LED light bar. (Image B)

(Image B)

After the magnets have been properly placed on the LED light bar you can take off the protective cover on the light bar cover before use. (Image C)
