

Petunias

Petunia x hybrida; Germination: Do not cover seed; 68-74°F; 4-5 days; Finish: 5-13 weeks

As one of the most popular genera in the bedding plant market, petunias are showy, resilient and offer an abundance of options. Not only are petunias a fantastic summer plant across the country, they also withstand a bit of frost, making them a plant of choice for fall markets in the South and West. The information below summarizes the trailing and spreading types on the left and upright types on the right.

Trailing/Spreading

- Low (5-15"), vigorous spreading/mounding plant habit (up to 3-4' plant spread)
- Technically a multiflora
- Smaller flowers than grandifloras but more numerous
- Low maintenance, self-cleaning
- Grow them in pots, containers, mixed combos, hanging baskets, and window boxes
- Great for garden beds, landscapes, annual groundcover, patio containers, and hanging baskets

Tidal Wave®	medium	seed, plugs

Upright Grandiflora

- Upright plant habit
- Large single (up to 5" diameter) or double flowers
- Large and showy flowers but fewer than other types
- Take a hit in rainy weather, but will bounce back
- Grow them in packs, pots, containers, mixed combos
- Great for garden beds and patio containers

Upright Multiflora

- Upright plant habit, more compact than grandifloras
- Smaller, more numerous flowers than grandifloras
- Single and double flowers available
- Quicker to bounce back after rainy weather
- Grow them in packs, pots, containers, mixed combos
- Great for garden beds and mass planted in landscapes and patio containers
