FARMORE® TECHNOLOGY - FI 400 SEED TREATMENT

FarMore Technology takes a different approach to pumpkin and squash seed protection using customized treatments to fit specific needs. It's the first line of defense and protection against several key seed diseases, seedling diseases, and key insects.

BROAD-SPECTRUM DISEASE PROTECTION

FarMore Technology has proven performance in the field against:

- General damping-off and seed blight
- *Fusarium* spp.
- *Pythium* spp.
- *Rhizoctonia* spp. (incl. post emergence protection)

EXCELLENT INSECT PROTECTION

Early-season insect protection can prevent or eliminate the possibility of diseases vectored by certain insects. FarMore provides excellent protection against Striped Cucumber Beetles in pumpkins and squash. Protection lasts for approximately 21 days after germination occurs.

PERFORMANCE AND CONVENIENCE

- Early season protection against disease and Cucumber Beetles
- Broad-spectrum protection in variable environmental conditions
- Enhanced disease protection gets crops off to a healthy start to maximize yield and quality potential
- Treatment is delivered in the bag, on the seed, to ensure proper application and convenience

Many of our pumpkin and squash varieties are available with FarMore® seed treatment. Look for the FarMore priceline in the price charts.

KEY

- ** Intermediate resistance to black rot
- ** Intermediate resistance to powdery mildew
- *** Intermediate resistance to powdery mildew and zucchini yellows mosaic virus
