

Instructions for Use

Tongue training

Tongue training can now be performed in three easy steps. All it takes is a few moments a day for a period recommended by your professional.

1

SLIP ON FINGER

Insert the tip of your index finger through the round opening of the Liper™ device until it reaches the inner mark. The slit on the nail side is designed to fit your finger snugly and not slip off.

2

PLACE BENEATH TONGUE

Slowly and carefully insert the Liper™ device into the lower part of infant's mouth. Identify the lingual frenulum and place it between both disks ("ears") at the device edge.

3

STRETCH THE FRENULUM

Slowly and firmly lift and lower the infant's tongue in order to stretch the tethered oral tissues of the lingual frenulum. Wash the device and repeat this
