Making Miracles Happen... Naturally!

Message from the Pack Leader:

Hello and welcome to August with Glacier Peak Holistics,

Wow, what a summer! It's hard to believe the kids are getting ready to head back to school. But we're not going to let that stop us from enjoying every minute left.

Did you know that August 1 is the Universal Birthday of Rescued Dogs day? So, Happy Birthday to all the wonderful rescues out there, and their rescuing pet parents! The world is a better place because of you! Later this month is National Dog Day on the 26th, and then my personal favorite, National Holistic Pet Day on August 30th.

Speaking of Holistic, you may not know that we have a daily holistic nutritional called [Daily Defense](#). This product is so great because it covers a lot health issues in one remedy. First, it is a daily detoxifier for the kidneys and liver. In a world so laden with toxins, it's extremely important to help the system to eliminate them so they don't cause health issues later in life. It also has herbs that are very high in vitamins A, E, K, B, and D, along with protein, phosphorus, iron, potassium, chlorine sodium, silicon, magnesium, and other trace minerals. Add to that eight enzymes that help the body to assimilate all of these much needed nutrients. Daily Defense also has immune boosting herbs to help ward off disease, sea veggies with naturally occurring iodine for a healthy thyroid and the diatomaceous earth quite effectively eliminates parasites in the digestive system so we add that too! So how do you make a great product even better? We put it in a larger package! What was 8 ounces is now 12, and for the month of August you can get the new larger size for the same price as the smaller package. What a great way to head into autumn!

Our recent trade show in Las Vegas was a huge success for us. We are now in even more stores than ever, and we are expanding daily. So, if you don't have a local retailer now, chances are you will in the near future. You can always ask your favorite pet store to contact us, and tell them to mention you... we'll send you a little thank you gift.

In this issue of our newsletter, you will find some wonderful stories about healthy dogs and their happy people. Also, an "Ask Deb" section for those of you wanting to know more about vaccinosis, its causes and what you can do about it.

Enjoy this last month of summer and Happy Tails,

Deb

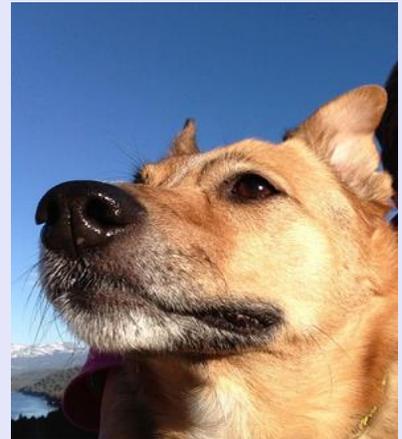

Janet Ciarcia and Grace - California

My dog Grace (11yrs young) was having difficulty using stairs, getting herself up, taking longer walks, and experienced what looked like painful muscle spasms on some of our walks. All in all a very big slow down for her usual active Cattle dog mix self. I brought her to a chiropractor for help but it actually seemed to make things worse. Her slow down seemed to happen practically overnight.

Not giving up on the situation we went back to her Vet who offered cold laser treatments. I agreed to try 6 treatments that would take place over the course of 2 ½ weeks. Still not satisfied, I remembered I had written down information on a couple of herbal remedies for pets that someone told me about. She said it could help with the type of issues Grace was experiencing and I remember this person saying the products were having very good results. These “products” were Inflapotion and Herbal Aspirin from Glacier Peak Holistics.

I went on your website to read about the products but I had a lot of questions so I decided to call your company. After speaking at length with you about your products I decided to order Inflapotion and Herbal Aspirin that day. I appreciated the time you took to answer - and continue to answer - all my questions, and the compassion you showed for my dog Grace and what she was going through. I had such a sense of hope after speaking with you and couldn't wait for our package to arrive.

I took Grace to her Vet's office for her first cold laser treatment and told the Vet all about your products that I ordered and how hopeful I was that they could really help Grace. I was especially excited that your pain management products could possibly keep Grace off of Rimaydl. Although Grace's Vet is more traditional than holistic, she was on board with Grace trying your products. She did, however, bring up a good point that starting both new things at the same time would be difficult to know which was giving Grace the biggest benefits, if any, so I agreed to hold off on the Inflapotion/Herbal Aspirin until after the cold laser therapy ended (June 30th). We didn't get good results from the

Grace

cold laser therapy and Grace even had a setback between the 5th & 6th treatment.

We were now at about 2 months with Grace hardly being able to walk much, no play time, and I was carrying her up and down the stairs. It was difficult to see her suffer and I had to give her low doses of Rimadyl at times to try to make her more comfortable until we finished the cold laser treatments and I could start the Inflapotion and Herbal Aspirin.

On July 3rd I started the Inflapotion/Herbal Aspirin. The first 2 days Grace received 1 scoop of Inflapotion 3 x's a day and 4 Herbal Aspirin (spaced out during the day). On the 3rd day I changed it to 1 scoop of Inflapotion 2 x's a day and 2 or 3 Herbal Aspirin a day - which is the amount I am still giving her 1 month later.

I would say by the 4th day Grace was showing improvement and by the end of the 1st week she was getting her "puppy" on. Those 2 months of inactivity left Grace with little stamina so for the first couple of weeks on your products we did short walks or lite play (sometimes it was too much as she seemed to have only enough energy for some but not all activity). In continuing to use these products, Grace is getting better. She is able to remain standing for longer periods of time, she seems to be able to get up easier, she's crazy about me rolling the ball across the living room for her to chase, and it makes my heart smile when I see her happily trotting around the house or outside. She even ran after something in the backyard - her favorite pastime - while I chased after her yelling, "no"! lol. The stairs continue to be a challenge for her but with all the other improvements I can't complain.

Needless to say I am very grateful for what these 2 products are doing for my Grace!

She is so much more comfortable and happy and I know this is something I will continue to give to her all of her days.

Thank you so much for your time and continued assistance. I feel very fortunate to have found out about Glacier Peaks and you can be sure I will be spreading the word about your products to all who will listen.

The word "miracle" on the bag of Inflapotion is spot on too, by the way!

Janet Ciarcia and Grace :)

Janet & Grace

Introducing our favorite daily supplement in a BRAND NEW SIZE!

Due to popular demand, we have upgraded our Daily Defense to be more user friendly!

We are now using a larger pouch which will make it easier to dispense and we've added an additional 4 ounces of product, bringing the total to 12 ounces to help it last a bit longer.

As an introductory special, we will be offering the new 12 ounce size at the original 8 ounce price through August 31, 2015.

Get your 12 ounce pouch for \$24.95!

Price will be \$34.95 as of September 1, 2015

Vaccinosis

by Deb Gwynn

Vaccinosis is actually a disease caused by the over vaccination of your dog. In most cases it is a chronic ongoing, and long term illness with varying symptoms. These symptoms range from physical issues, including hair loss, lethargy, fevers, colitis, runny eyes and sneezing, and more. These reactions are caused by not only the delivery of the vaccine but also the unnatural ingredients in the vaccine itself.

The delivery, which is by injection, bypasses the whole immune system and renders it useless in fighting off illness. In the medical professions attempt to stop disease, they are actually contributing to a new form of disease. Symptoms can range from mild to fatal.

- **What are the signs?**

Symptoms are different for each dog, though many are very similar. Dogs with chronic digestion problems, skin issues, sneezing and runny eyes, swelling, hives, and thyroid issues, just to name a few. If your dog has any chronic disease, I recommend having titers* run on to find out if the previous vaccinations are still present.

- **How do I know if my dog has vaccinosis?**

Seek a holistic vet, they seem to be the only professionals to agree that over vaccination is a big problem. Detoxification is necessary along with a species specific diet. Your vet will have good guide lines for you to follow.

- **How can I prevent my dog from getting vaccinosis?**

I recommend doing blood titers* annually or at least every other year.

*Titering is a blood draw, done by your vet, and sent off to a lab that looks for any existing antibodies to the virus's previously vaccinated for. In nearly every case I've investigated, the vaccines have held, some for the life of the dog.
