

## FLOCK SOX INSTRUCTIONS

There are 3 ways to attach stakes to your flocksox. The fiberglass stakes are intended for the sentry decoy. Remove sentry head insert the fiberglass stake through the chest. Then attach the head this will keep your stake locked into position.

The black hooked wire stakes are intended for the feeder decoys. Insert the black metal rod through hole in the top of the head near the bill. There is a hole in the bottom of the head for the stake to pass through. Pull the stake tight so that the u shape bend goes almost flat to the decoy. Attach the retainer clip on the underside of the head.

The third way is with stakes not provided. You can use 1/4 dia fiberglass or steel stakes (not supplied) and set the decoy on top of the stakes. If ground is frozen this will be a good option as you will be able to pound stakes into the ground and insure that your decoys will stay put.
