

SILLOSOCKS TURKEY DECOY INSTRUCTIONS

STAKE INSERTION

For best results slightly heat the tip of the stake. Insert it in your decoy in the position shown in the picture. Push the stake all the way through until the U in the top is pilled into the corrugated material.

For added realism, I usually mist the upper portion of the body with a flat black paint. Do not completely cover. Doing this will allow the iridescent colors to come through.

We have had good results in the spring using multiple decoys. Sets with 8-12 Sillosocks turkey decoys has worked well for us.

FALL TURKEYS

A fall tactic we have used with great success is to find an active feeding field where the birds are regularly feeding. Setting up 10-20 decoys to replicate the feeding flock really works. I have used my layout blind in open fields with this tactic numerous times.

HAPPY SAFE HUNTING!

NOTE: always take precautions when transporting and using any turkey decoy.
