# Because keeping you safe is our top priority...

## Please take a moment to read through the following care and use instructions for your new gloves.

We care a lot about your safety and satisfaction. That's why we've put together a few precautions for you to follow while using your NoCry Welding Gloves.

- NoCry welding gloves are not indestructible. They are flame and heat resistant, but there are certain limits to how much heat and flames they can take. *Always use caution when handling hot objects, even when wearing the gloves.*

- If possible, avoid using the gloves when they are wet. This can cause them to lose their form and become less comfortable to wear. If the gloves get wet, hang them to drip dry. Do not use machine drying.

- Try not to allow industrial oil or greases (lubricants) come into contact with the gloves as this will reduce their flame resistance and may cause them to be readily ignited or charred. Most oil and grease is highly flammable.

- If your welding gloves have turned dry and stiff due to UV rays or high heat, wipe them with a damp cloth, then allow them to dry completely. Using small, circular motions, rub a light coat of leather conditioner into the gloves. Let the conditioner soak in for 30 minutes, then apply another coating. Repeat this process until the leather is as soft as you want. Use a pH-balanced conditioner and avoid products made from petroleum or mineral oil.

- These gloves should not be washed and laundered. Use a dry Suede Brush to remove dust and dirt from your gloves.

If the gloves you received are not a great fit or you have any questions or concerns about them, feel free to contact our customer support at wecare@nocry.com. We're always here to help.
