

# The Bouquet Speculum™

Opens radially to provide a full 360 degree view of the cervix.

The Bouquet Speculum provides a more dignified and comfortable patient experience, allowing for an unobstructed view of the uterine cervix.

This novel patented speculum was invented and patented by a family physician who sought a better way to provide patient care and cervical exams, engineering a 5-petal device in place of the two-bladed standard speculum.

The resulting device allows clinicians to provide trauma-informed care avoiding all of the issues with two-bladed speculum. A 1 cm in diameter, perfectly round insertion tip opens in a radial unfolding to open symmetrically at the point that optimizes comfort for the patient and visibility for the clinician.

*The handle on the Bouquet speculum is 135° allowing for examinations on bunks, tables, even beds as the handle is designed not to bump up against an exam table that doesn't have foot rests or a portion that doesn't "drop out".*

## Key Features

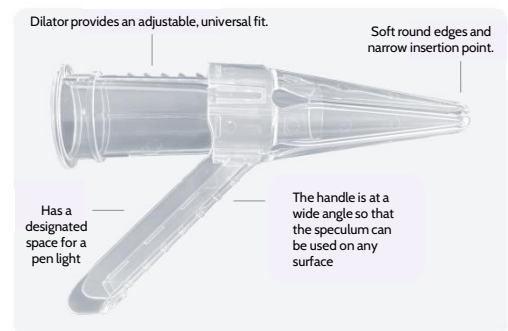

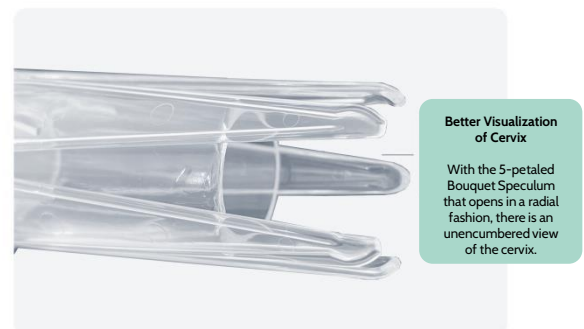

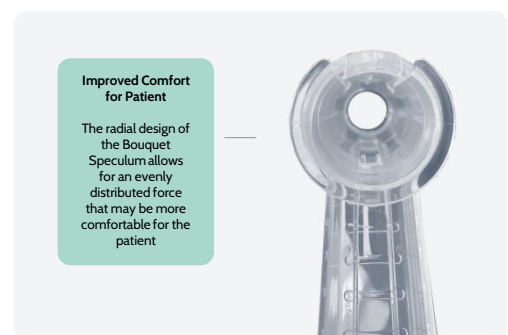

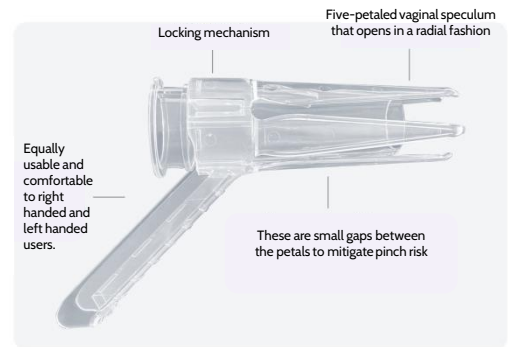

- Unfolds like petals of a flower (5 petals)
- Universal fit for all sized persons, including younger girls
- No disconcerting 'click' sound (important for PTSD)
- No pinching between blades
- Much greater comfort for patient physical and psychologically

## Clinicians have greater visibility of full cervix

- Complete visibility of the cervix for the clinician
- Unique handle at 135-degree angle to the device (rather than the awkward 90 degree)
- Petals around the tip can be removed to access cysts and other procedures
- Can be used on any kind of table or bench, not just ob/gyn
- Small, rounded insertion tip and a radial opening with stops at 1, 2, 2.5, 3, 3.5 cm
- Keeps the vaginal walls from collapsing even with obese patients
- Includes bright LED light source

## Patients are more at ease

*“much quicker exam with less pain” – patient*
