

PREEMIE TEST

The Premie-Test is the first medical device capable of accurately assessing gestational age immediately after an infant is born!

Learn more about the Premie Test below!

According to the WHO, every year around 15 million babies are born too early and 1 million die due to prematurity complications. Whenever a baby is born too small, birth attendants need to make time-sensitive decisions about immediate interventions and referral of the newborn to a hospital.

Designed by Birth Tech, the Premie-Test is the first medical device capable of accurately assessing gestational age immediately after an infant is born!

It's portable & easy for non-specialists to use to assess gestational age and make clinical decisions about transport or resuscitation!
