

The air inside your car is prone to high levels of pollution due to vehicle exhaust. During heavy traffic, pollutants outside seep into your car, making the air inside your car up to 10 times more polluted than typical city air! Address this issue by placing an AirRevival car unit in your car and see a drastic reduction of pollutants within minutes.

A simple, efficient and unique solution to a big problem!

The AirRevival N7 car air purifier uses electrons to create a harmless electrostatic field which directs airborne particles to the car window where the unit is attached. The AirRevival unit operates in complete silence and is run through the cars 12V socket. The unit doesn't generate any harmful ozone which makes it safe to run throughout your travels.

The AirRevival system is completely maintenance free and therefore very cost effective. Particles collected on the window do not affect the overall efficiency but can be cleaned off for a nicer atmosphere if needed.

Specification:

Size (HxWxD): 145 x 90 x 35 mm

Weight: 0.2kg including car cable

Energy consumption: 0.6 Watt, powered via the car 12V socket.

Ozone emission: 0 ppm

Sound level: quiet

Cleaning effect: AirRevival reduces the number of nano particles in the cabin with 98% when run with recirculation.

Certifications: EMC, CE

Country of manufacture: Sweden

Harmonized code: 8421.3990

Other: As with all electrical devices, an electrical discharge may be released if the power is left on while assembling the system. Such discharges may cause mild discomfort but are normal and not in any way dangerous. Always complete assembly before turning the power on, and always turn off the power before adjusting anything, moving the system or cleaning the window.
