# Scanning solutions for Healthcare

By scanning and deploying a document management solution, healthcare organisations can more efficiently manage all their paper and digitally born material. Key benefits include:

- Centralised storage with enhanced security for all information, including patient records.
- Business process agility that can lead to productivity gains and cost savings.
- Enhanced compliance (GDPR) throughout all departments with all regulatory guidelines.
- Faster access to patient information, leading to improved patient outcomes, better patient engagement, and better access to critical information across the care continuum.
- A notable ROI, with most organisations reporting a full return on their ECM investment within 18 months of implementation.

For archiving and digitizing large volumes
