

TIMBER & UPHOLSTERY GUIDE

TIMBER AND TIMBER FINISHES

We manufacture all our durable wooden furniture in solid Ash timber, sourced from sustainably managed forests.

\*Please be aware that colour variations may occur due to differences in screen resolutions. The images provided serve as a general guide.

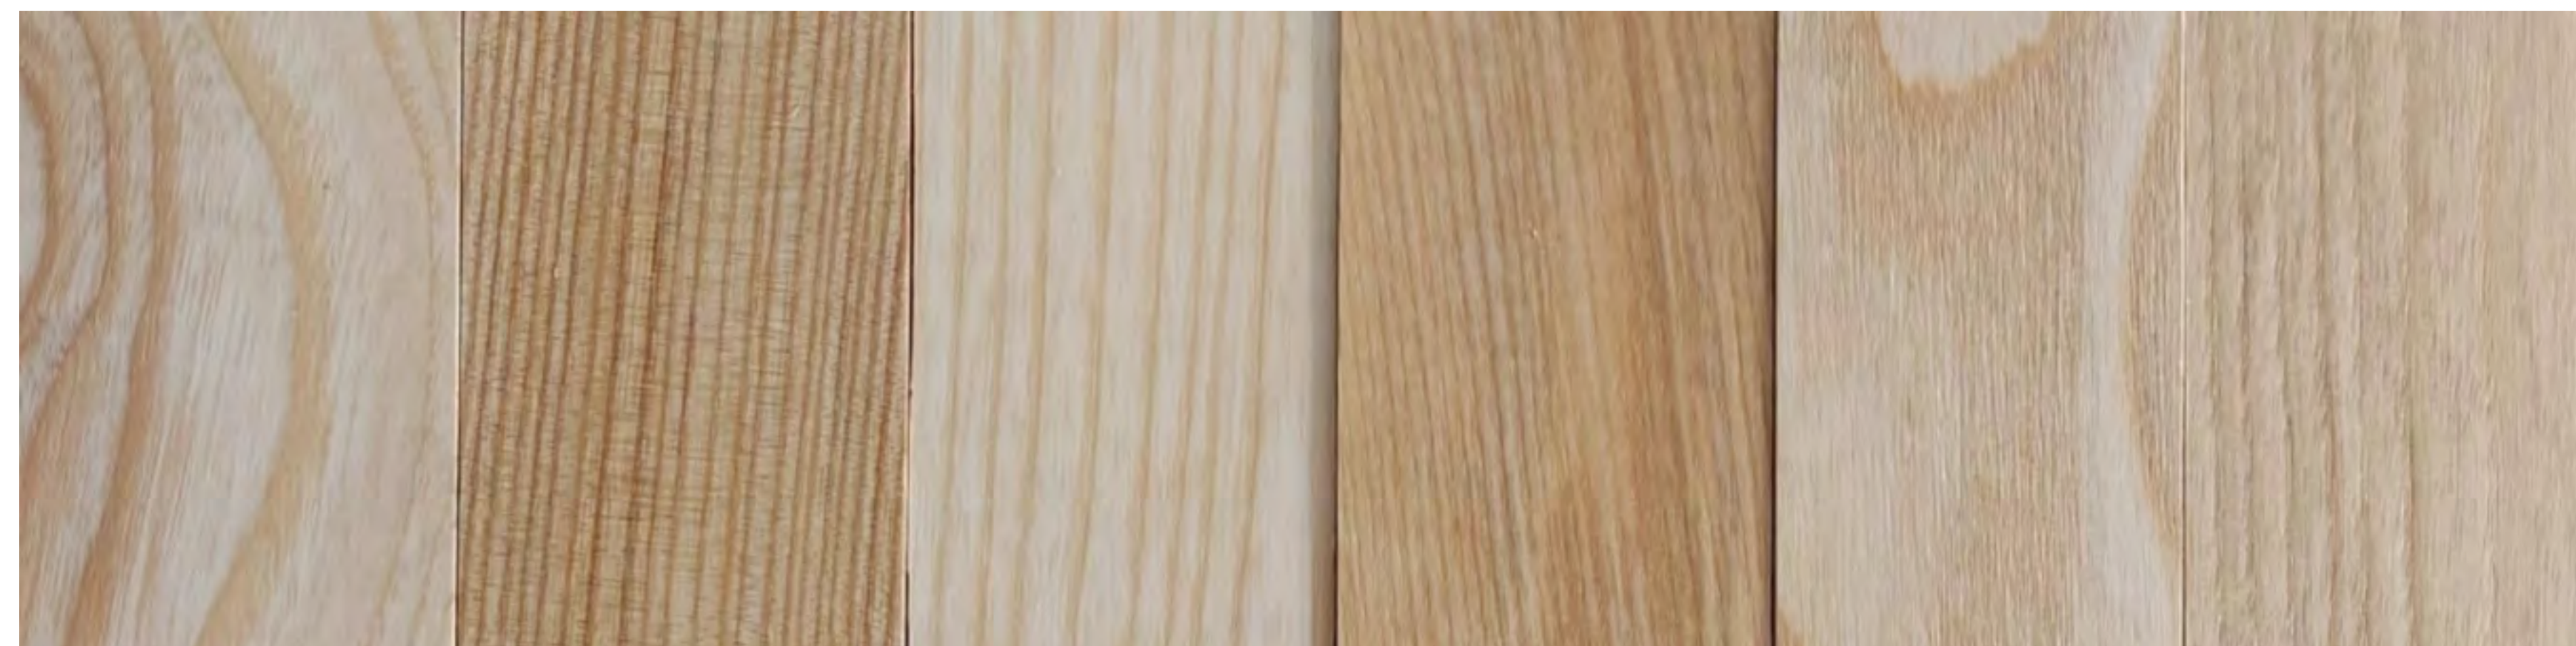

THE UNIQUE CHARACTER OF SOLID WOOD

The wood tone and grain, varies from tree to tree and even plank to plank, which can impact the overall consistency of the chair colour. This results in beautifully, unique furniture.

These variations are out of our control and mean that one product will look different to the next as no two chairs are made from the same piece of wood. The grain and flame of the plank determines how stains are soaked up and the resulting overall tone. As each plank isn't uniform in grain or flame, variations will occur in products stained in Light Brown and Dark Brown. Our Black finish is more uniform and less likely to vary.

Our Quality Control department is vigilant in screening for variances that are outside of our acceptable standards. Any product or stain sample available to our clients is approved as varying within our range of what is unavoidable and normal.

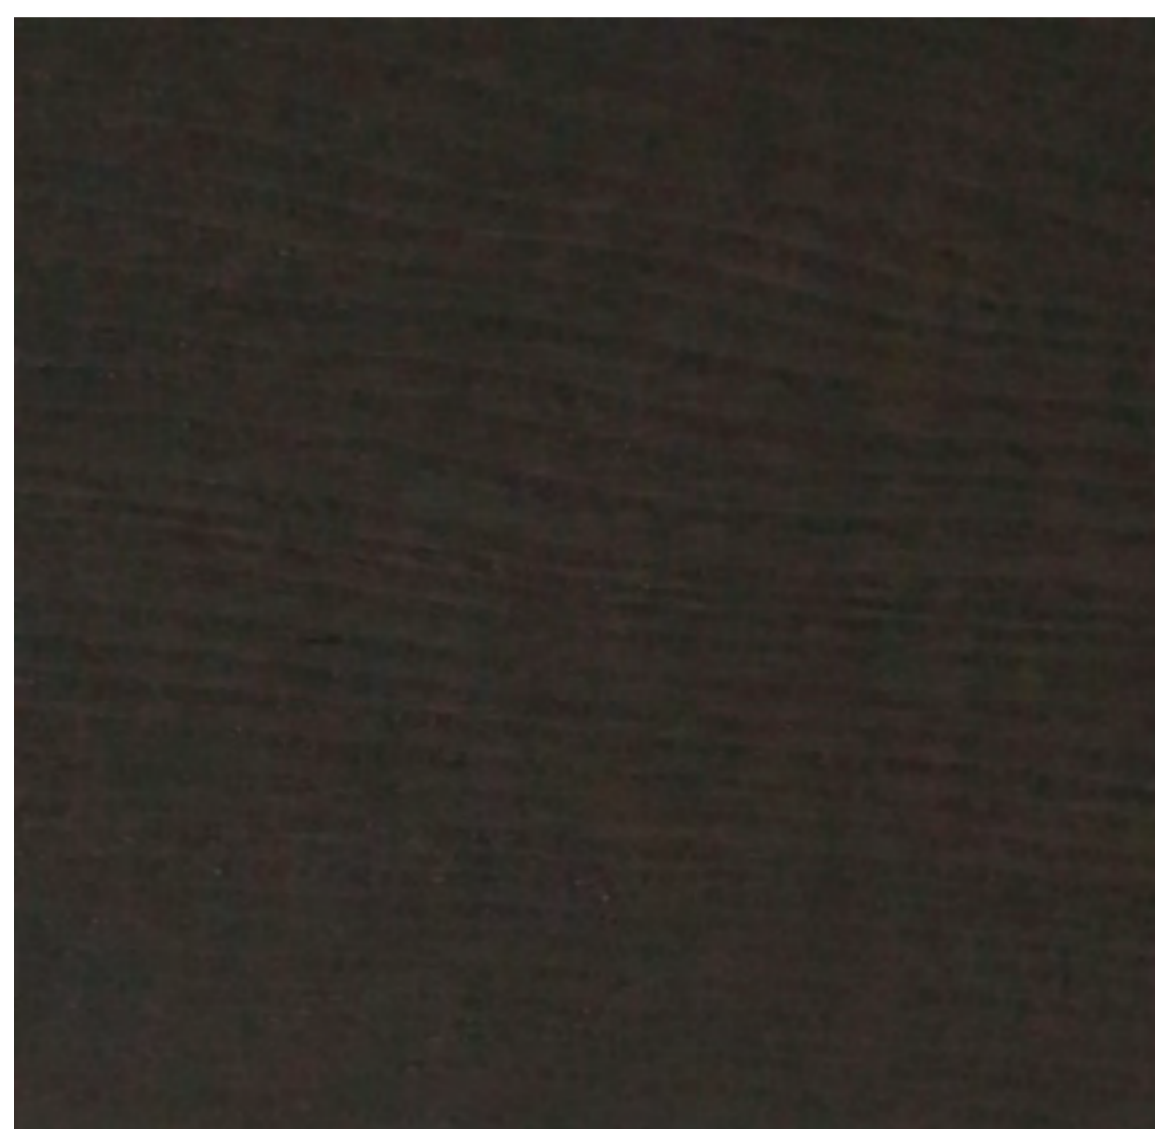

Below a snapshot of how much Ash can vary:
