### Parts Included:

- Clamp Bracket (2)
- Lock-Rod Striker Brackets (2)
- 1/4" Self-Drilling Screws (8)
- 1/4" Rivet Nuts (12)
- Threaded Insert Installation Tool
- 1/4" Plain Washers (12)
- 1/4" Hex Bolts (12)
- Cap Clamps (2)
- 1/8" Hex Key
- Gas Springs (4)
- 180 Cover

### Tools Required:

- Drill
- 3/8" Nut Driver
- 3/8" Bit
- Marker
- Hammer
- 9/16" Wrench
- Ratchet Wrench
- 7/16" Socket
- 9/16" Socket
- 9/16" Wrench
- Ratchet

### Pre-Installation Note:

If your truck has bed rail caps, you should affix the included bulkhead prep kit prior to installing the DiamondBack 180.

### Installation Guide

**Normal install time**: 75 minutes

**Important installation information**

**Helpful Hints**

- Keep an eye out for these icons:
  - Normal install time
  - Important installation information
  - Tips to assist installation

### Preparing the Bulkhead

1. Attach the **clamp bracket** to the bulkhead, centered side to side, flush with the top rail, and longer leg down using a drill, 3/8" nut driver bit, and four self-drilling screws.

2. Attach a **lock-rod striker bracket** to each front corner of the cargo bed, the bracket’s V bend pointing rearward and the side flange located as high as possible without it breaking the plane of the top of the bed rail, using a drill, 3/8" nut driver bit, two self-drilling screws, and the two slots nearest the ends of the bracket.

3. Detach all three brackets by removing the self-drilling screws.

4. Use the holes in the truck body left by the self-drilling screws as pilot holes to drill larger, 3/8" holes.

5. Hammer a **rivet nut** into each hole.

6. Insert the installation-tool mandrel into a rivet nut. Hand-tighten it until its hexagonal sleeve is tight to the face of the rivet nut.

7. Use a 9/16" wrench to hold the installation-tool sleeve as you tighten the mandrel with a 7/16" socket until the rivet nut deforms and locks against the interior of the bed wall.

8. You’ll know the rivet nut is fully compressed when you feel the mandrel become very difficult to turn.

9. Remove the installation tool by unscrewing the mandrel.

10. Repeat steps 6-8 for each rivet nut.

11. Reinstall all three brackets using the hex bolts, plain washers, and a 7/16" socket.

12. Do not overtighten the bolts or you might strip the rivet nuts.

13. If you are also installing a **Cross Bin**, do so now. Refer to page 2 of the Cross Bin Installation Guide for details.

CONTINUED ON REVERSE >
MOUNT THE COVER

12 Close the tailgate. Place the cover onto the cargo bed so that the weatherstrip along the cover’s rear angle is firmly compressed against the inside edge of the tailgate.

13 Center the cover side to side.

14 Open the tailgate. At the rear of the bed, mark drill locations on both bed walls using the mounting-bracket slots as a template.

15 Remove the cover.

16 Drill the marks using a 3/8” bit.

17 Repeat steps 5–8 to insert rivet nuts into each hole.

18 Attach the front of the cover to the clamp bracket using the cap clamps.

19 Repeat step 12.

20 At rear, insert a hex bolt through a plain washer, through each bracket slot, and into each rivet nut. Tighten with a 7/16” socket.

21 To get the weatherstrip compression necessary for its adhesive to cure and for the cover to keep out the weather, have a second person press down on the rear of the cover while you’re attaching the mounting brackets.

22 Cheat these marks slightly lower than the vertical center of the slots.

ADJUST THE LOCK RODS

23 Use the 1/8" hex key to loosen the set screws on the linkages of the forward lock rods.

24 Position the lock rods tight against the underside of the striker brackets (forward) and T-panel gutter (rearward) so that they draw the panels down and compress the perimeter weatherstrip. Tighten the rod guide brackets with a 7/16” socket.

25 You can leave your rearward lock rods alone. They come pre-adjusted from the factory.

26 Adjust the length of the lock rods & retighten the set screws so that:
   A. with the lock handle in the open position, the rod tips clear the striker brackets,
   B. with the handle in the closed position, the rod tips do not strike the bulkhead, and
   C. the rods point downward.

27 To get the weatherstrip compression necessary for its adhesive to cure and for the cover to keep out the weather, have a second person press down on the rear of the cover while you’re attaching the mounting brackets.

28 If there isn’t enough travel in the forward rod guide bracket to position the rod so that it presses against the striker, reshape the striker’s V bend with pliers.

29 Double-check both panels to ensure they open, close, lock & seal correctly. If at any point the weatherstrip does not touch the bed rails, readjust the lock rods and mounting brackets as needed.

30 Operating the access panels is easiest when you press down as you open or close them.

ATTACH THE GAS SPRINGS

26 Attach the gas springs to the ball studs.

27 To avoid premature failure of your gas springs, attach them barrel up, shaft down.

28 Leave the cover closed and locked for 24 hours to allow the weatherstrip adhesive, which is pressure-sensitive, to fully cure.
