TOOLS REQUIRED:

| Drill | 5/16” Bit | Marker | Ratchet Wrench | 1/2” Socket | 3/16” Hex Key |

PRE-INSTALLATION NOTE:

If you haven’t installed Side Adapter Bars yet, do that first. Refer to the ATV Carrier: Side Adapter Bars Installation Guide for details.

INSTRUCTIONS

1. Attach the uprights to the cover in the positions outlined at right by sliding their hooks under the adapter bars and pulling their tops toward you until the uprights rest on the cover’s bevel.

2. Double-check that the uprights can be detached from the cover without obstruction by a cleat or other external hardware. Adjust their location if needed.

3. Hold a rail across a pair of uprights, flush with the tops. Mark drill locations on the rail using the pre-drilled holes in the uprights as a template.

4. Drill only the outermost marks with a 5/16” t bit.

5. Insert bolts through the rail and into the uprights. Put a lock washer and nut onto each bolt. Finger-tighten the nuts.

6. Drill the other two holes in the rail using the pre-drilled holes in the uprights as a template.

7. Repeat step 5.

8. Tighten all the hardware using a 1/2” socket and a 3/16” hex key.

9. If your cargo bed measures 7’ or longer, repeat steps 3–8 to assemble to second Side Rail.

A. Beds 7’ or longer: Place one upright just in front of the rearmost cleat on the tailgate panel, two on the center panel, and one just behind the forwardmost cleat on the cab panel as shown.

B. Beds between 6’ and 7’: Place one upright just behind the forwardmost cleat on the cab panel, and one on the center panel.

C. Beds 6’ or shorter: Place one upright in front of the rearmost cleat on the cab panel, and one behind the forwardmost cleat on the tailgate panel, at least 25” from the first upright.
