2.1 Remove the double sided tape from the bottom of the track. Starting on one end, feed the Track Rubber (Item 3) onto the Track (Item 1). Trim the Track Rubber to the correct length. Do this on the remaining 5 Tracks.

2.2 Assemble the Track End Caps (Item 4) to the four 600mm Tracks (Item 1) using M3 x 6 Self Tapping Screws (Item 5) as shown.

2.3 Center the Tracks (Items 1 & 2) horizontally on each panel of the DiamondBack. Depending on width of your truck bed, space the Tracks 50mm to 150mm from the bent edge. Max distance between holes is 1475mm. Mark the pre-drilled holes in the track onto the cover. Double-check the underside of the cover to verify that nothing will obstruct the washers and bolts at these locations including the possibility of the drill bit hitting your bed rails. Should a marked hole position be inaccessible using a nut to fasten the screw, use the supplied jack nut. Refer to 2.4. Remove the Tracks and drill a 4mm pilot hole on each of the marks you have made. Open the holes to 6.5mm.
2.4

Open any inaccessible holes to 12mm.
Insert an M6 x 30 Button Head Bolt (Item 11) into the one side of the Installer Wrench (Item 9).
Loosely tighten a Jack Nut (Item 9) onto the Button Head Bolt as shown.
Place the assembly into one of the holes drilled in 2.3. Using a Cordless Drill and a 4mm Allen Key Bit, set the Jack Nut into the hole while holding the Installer Wrench firmly.
Make sure that the Jack Nut has pulled up all the way to the inside skin of the door panel.

2.5

Before fitting the Tracks, place a small bead of silicone around each hole.
Secure the Tracks to the Cover using M6 x 30 Countersink Bolts, M6 x 19 x 1SS Flat Washers and M6 Nyloc Nuts (Items 6, 7 & 8) as shown.

2.6

To fit your Front Runner load bars, remove the End Caps from one side Track.
Slide the stud plate into the Track and refit the End Caps.
