MEASURING GUIDE

This guide will help you to correctly measure your child's feet, so when you buy online from us, you can shop with confidence. Remember, when your

shoes arrive you should assess the fit using our 'Check the fit' guide. You can download it from: www.startriteshoes.com/fitting

1. Print out the gauge. Check that the gauge has printed at the correct size by comparing the millimetre markings against a ruler. **Make sure your printer is set to 100% or 'do not scale'.**

2. Cut along the dashed line to remove the width measure from the sheet.

3. Place the chart on a hard floor surface. You may wish to place the heel line up against a wall for easier measuring.

4. Position your child's heel as shown. The back of the heel should line up with the thick line. For best results your child should be standing against a wall and on a hard surface. Distribute weight equally between both feet.

5. Measure the maximum length. You don't need to allow extra, our website does all that. Measure both feet and select the greatest figure.

6. Take the width measure and place under your child's foot and wrap around at the widest point as shown. The widest point is diagonally across the foot from the big toe joint to the little toe joint. If you are unsure where the toe joints are, run your finger along either side of the foot, and you will feel a bump, these are the toe joints.

7. Pull the measure gently and read the measurement where it meets the starting point. Measure both feet and select the greatest figure.

8. Enter the width and length measurements into the size calculator on startriteshoes.com. Click the button and we'll work out the suggested size shoes for your child.
