

Organic Craft Grow Kit / Usage Instructions

8 plants in 2 or 3 gallon pots

If you run out early, not to worry. Residual nutrients remain in the soil and will complete the cycle.

These instructions provide the optimal nutrient load for 8 plants using 2 or 3 gallon pots, from transplant to bloom.

What about Soil?
For best results grow in peat, coco fiber, or potting soil mix.

Fertilize & Water Once-a-week

Sprinkle on Soil

Measure, sprinkle & lightly mix nutrients specified evenly into the soil of 2 POTS once-a-week. Repeat step to the remaining 3 sets of 2 plants. Use included measuring tool.

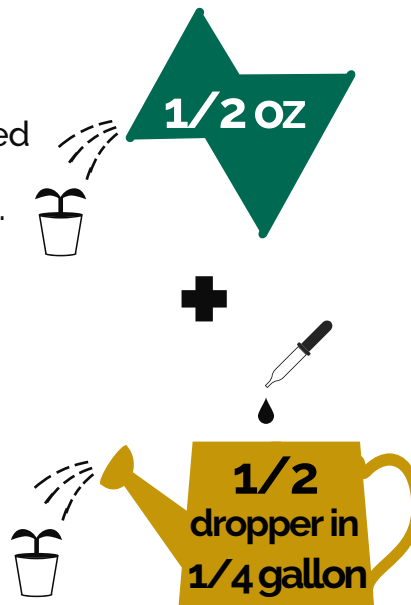

Boost & Water

Add Bloom City Boost to water. Apply the full amount of boosted water evenly across 2 POTS once-a-week. Repeat step to remaining 3 sets of 2 plants.

Hint: Apply additional water as needed throughout the week (without boost). Don't over water, dryer might be better.

GROW phase

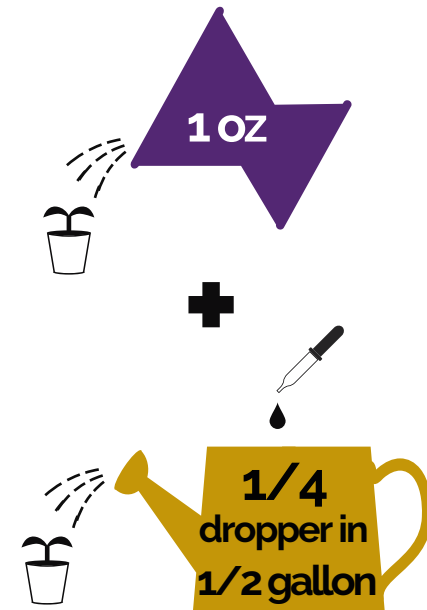

Weeks 1-8

1/2 dropper = 20 drops

BLOOM phase

Weeks 9-16

1/4 dropper = 10 drops

Check off once-a-week:
