

## Step 7: Thread Cord Through The Other End Of Buckle (Male End)

Now connect the male buckle to the female end on the SpeedyJig™. Take the RIGHT cord and go OVER the top of the buckle and pull cord snug. Take the LEFT cord and go UNDER. Be sure to keep your core from crossing.

**PRO TIP: This will prevent a big bump on this end of the buckle and have a nice smooth even transition.**

## Step 8: Starting your Cobra Knot

Take the cord on the right side (A) and lay over the top of your core (C) (two cords in the middle). Now take the left cord (B) and place it over the top of the right cord (A) and under the core (C) and up and through the loop on the right side. Pull snug.

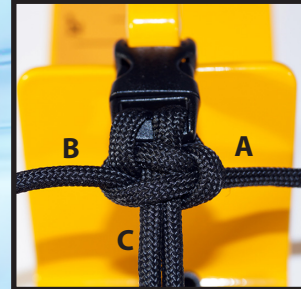

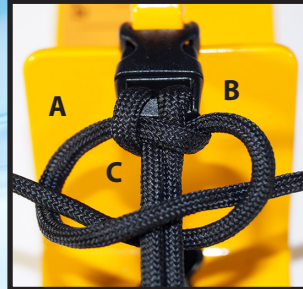

**PRO TIP: The key to a nice uniform bracelet is to use the same force for each knot pulled.**

## Step 9: Completing the Cobra Knot

Take the Cord that is on the left side (A) and lay it over the top of your core (C). Take the left cord (B) and place it over A and under the core (C) and through the loop of A. You have now completed a cobra knot. Keep repeating steps 8 and 9 until you reach the other end.

**PRO TIP: An easy way to remember this is to say Over, Over, Under & Through.**

## Step 10: Almost Done

When you have reached the other end remove the bracelet from the SpeedyJig™. To secure the two remaining cords, lift up the loop next to the buckle and thread both left and right cord through as shown below. Then pull it tight.

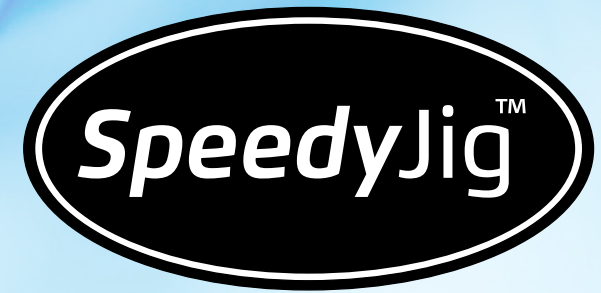

## Step 11: Finishing the Bracelet (Parental Supervision)

Cut the remaining ends being sure to leave about an eighth of an inch. Seal the ends with a lighter be careful not to burn yourself. While the ends are hot, use the metal side of the lighter to push against to mushroom it over and seal it.

**You Have Now Completed A Cobra Knot Paracord Bracelet!**

**Email us at [Help@SpeedyJig.com](mailto:Help@SpeedyJig.com)**

## How to Make a Cobra Braid Paracord Bracelet Using the SpeedyJig PRO™ or SpeedyJig XL™

**You will need a SpeedyJig™, 2 sets of matching buckles, about 10 feet of paracord, a pair of scissors, a ruler and a lighter.**

**[www.SpeedyJig.com](http://www.SpeedyJig.com)**

## Step 1: Measure Your Wrist

To determine how long your bracelet should be you must measure your wrist. Take the paracord and wrap it once around your wrist. Note where the cord meets. Using a ruler, measure the distance from the end of the paracord to where you noted. Add one inch to the measurement for shrinking and comfort.

**Example:** A 7 inch wrist would have final measurements of 8 inches.

**PRO TIP:** You will need about 12 inches of paracord for every 1 inch of bracelet.

## Step 2: Adjusting Your SpeedyJig™

Setting up the SpeedyJig™ to make the correct length bracelet is easy. Loosen the wing nut and slide the jig open so that the tab lines up with the ruler at the length you want. For an 8" bracelet, slide the the tab to the 8" ruler mark. (Refer to picture to determine where the jig should be set based on the size buckle you will be using).

**Example:** 8 inch bracelet would be 8 inches.

## Step 3: Attaching the Anchor Buckles

Take one buckle set and separate it. Slip the female end over the tab on one end of the jig and do the same with the male end on the other tab. These will anchor your bracelet in place while you are weaving it. Place the SpeedyJig™ to the side for now.

## Step 4: Fold The Paracord

Fold the paracord in half so that both ends meet together. This will create a loop on the other end.

## Step 5: Thread Cord Through Buckle (Female End)

Take the female end (curve side face down) of your buckle and thread the two ends of paracord through the slot to form a loop.

## Step 6: Cinch The Cord To Buckle

Pull both ends of the cord through the loop until tight against the buckle. Connect the female end to the male end that is attached on the jig. Let the right side fall on the right and left side to fall to the left.

**PRO TIP:** This type of knot is called a Larks Head knot.
