↑  
pH

ALKALINE LEVEL INCREASES

↑  
O<sub>2</sub>

OXYGEN CONTENT INCREASES

Institute Hagalis, an international research lab for quality analysis of water, conducted a scientific study of VitaJuwel's effect on water. Two samples were examined: a neutral sample with tap water from Ueberlingen at Lake Constance, Germany and a sample of the same water after being treated with VitaJuwel. These are the results:

- distinct improvement of tap water quality
- neutralization of harmful substances' information
- improvement of the pH-value and oxygen content
- increase in bioavailability of minerals
- improved energy balance
- increase of vital powers
- measurable quality level otherwise only found in natural spring water
- high biological valence

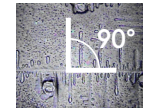

“The treatment with VitaJuwel resulted in very clear quality improvements in both biological as well as technical regards. Compared to the neutral sample - or to other comparable tap waters - a significant quality increase was measured. For this reason, the sample is reaching a quality level otherwise only found in natural spring water.”

## WATER, RESTRUCTURED

Water is more than just an assembly of oxygen and hydrogen molecules. It's more than just H<sub>2</sub>O. Scientists have discovered that water has memory and that it can be positively stimulated by sources of vibration and energy. Vital and fresh water features a sublime crystalline silhouette. We asked the HadoLife laboratory in Austria to take microscopic photos of water before and after it has been treated with VitaJuwel. Below are the results...amazing!
