EXPERIENCE
TRANSFORMATIVE
HAIR REGROWTH

PIONEERING TECHNOLOGY FROM THE LEADER IN LASER HAIR GROWTH

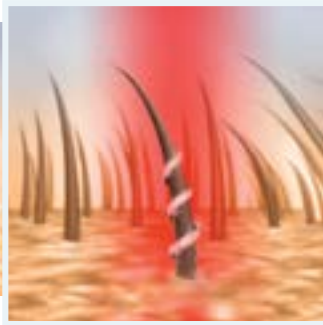

Hairmax[®] laser devices deliver gentle, nourishing laser light to your hair follicles to stimulate cellular energy production and create a healthier environment for hair growth. This boost of light energy encourages more blood flow to the follicle, bringing in more oxygen and nutrients, activating antioxidant defenses, and speeding up the elimination of waste products such as DHT.

Hairmax laser light treatments help restore your hair's natural growth cycle, resulting in new hair growth with increased density, fullness, and vibrancy.

Weakened Hair Follicles

Laser Stimulation

Healthy Hair Growth

Weakened Hair Follicle (left picture)

If not stimulated by laser light, the follicle will eventually weaken and stop producing new hair.

Laser Stimulation (center picture)

With laser stimulation the Anagen growth phase is extended, allowing your hair to grow longer, fuller, and thicker. With laser stimulation, in the Telogen phase, the vascular network is restored, ending the Telogen phase and encouraging the hair follicle to return to the Anagen growth phase.

Healthy Hair Growth (right picture)

The end result: a healthy hair growth cycle producing thicker, fuller hair.

*Hairmax[®] laser devices are indicated to promote hair growth in males with Androgenetic alopecia who have Norwood-Hamilton Classifications of IIa - V, and in females with Androgenetic alopecia who have Ludwig (Savin) Classifications I - II or frontal patterns of hair loss and who both have Fitzpatrick Skin Types I - IV.

WHAT TO EXPECT RESULTS OVER TIME

1 - 2 Months

You may not see visible results at first, but changes are beginning to occur beneath the surface. Increased blood flow begins bringing in more oxygen and nutrients to your follicles. Dormant, weakened follicles are revitalized. You may notice some shedding, which is a positive sign, as thin wispy hairs are shed and will be replaced with new thicker hair.

3 - 4 Months

During this period visible new hair growth begins. Shedding slows and you will see and feel new hair growth. Thin, weakened hair is replaced by thicker, healthier hair with increased manageability and shine.

5 - 6 Months

This period is where patience pays off. Your hair continues to grow in thicker, denser and fuller. You will see less scalp showing through as thinning and balding areas fill in with vibrant new growth.

Post 6 Months

Significant improvements in your hair growth, thickness and vitality continue. It is still very important to use your Hairmax laser device consistently to keep your follicles energized and hair growing strong.

WHAT'S EVERYONE SAYING?

After about 4 weeks I noticed my hair felt healthier, my hair strands definitely felt thicker and healthier. I had new growth, and I saw more coverage because the current strands are thicker. At two months my hairdresser said she thought my hair looked healthier.

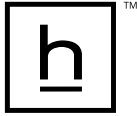

K. Johnson., age 51

I faithfully use it 3 times per week and after just 3 months, I am pleasantly surprised at my results. I have new hair growth all over my head and my hair texture looks so much better!

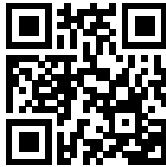

Sherri M.

I have been using this consistently because I started noticing a small receding hairline and I wanted to stop it dead in its tracks as well as regrow the hair I lost. Well, the first 2 months of use, I did not notice much but from the 3rd month and forward, I noticed some smaller hairs coming back. Consistent use for months 4 and 5 made the results evident and clear. It definitely regrew my hair.

Waitasecun, age 44
