

The SVDS Boost is an exact reproduction of the headphone amplifier within the Schaffer-Vega Diversity System (SVDS) wireless receiver, introduced in 1975. Originally designed for monitoring purposes, a host of legendary musicians utilized this boost to push the front end of their amplifiers.

CONSTRUCTION

- 100% Analog Circuitry
- High quality PCB with gold plated contacts
- Heavy Duty Footswitch
- Commercial Grade Pots
- Neutrik Jacks

SVDS Boost

The Schaffer Replica "SVDS Boost"

This is not another clean boost! The vintage coloration and harmonics produced by the SVDS Boost add rich texture to chords and lead lines. The tone is pure analog and absolutely unique.

FEATURES

BOOST is capable of a massive 30 db signal increase, pushing your tube amp into uncharted territory and releasing copious harmonics, singing sustain and controlled feedback.

'GOALPOST' EQ expands the far ends of the frequency spectrum while leaving your mid curve intact. Retains fullness and presence at any setting.

INTERNAL GAIN POT may be fine tuned to maximize pickup response or driven to increase harmonic clipping. Factory setting is 50%.
